CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Claim 23; SEQ ID NO 32; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain IL-12p35 subunit protein
CC   encoding full-length cDNA.

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Example 3; SEQ ID NO 34; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain IL-12p35 subunit full-length
CC   complementary DNA.

PT   Novel feline cytokine protein - useful for treating feline auto:immune
PT   diseases, e.g. those caused by feline herpes virus or feline calcivirus.
XX
PS   Claim 22; Page 57-58; 94pp; Japanese.
XX
CC   This sequence encodes a novel feline cytokine protein, FLAFp35. This
CC   protein can be used in the production of a FLAFp35/FLAFp40 heterodimer
```

```
CC   which can potentiate the cytotoxic activity of feline cytotoxic T
CC   lymphocyte cells. Such proteins are used for treatment of feline
CC   autoimmune diseases e.g. as caused by feline herpes virus or feline
CC   calcivirus

CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Claim 23; SEQ ID NO 101; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline N-terminal single chain IL-12p35 subunit
CC   protein encoding cDNA.

CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC proteins. A composition comprising a feline IL-18, feline caspase-1,
CC feline IL-12 single chain or canine IL-12 single chain proteins, a
CC nucleic acid encoding these proteins, mimetopes of these proteins,
CC multimeric forms of these proteins, an antibody against these proteins,
CC or an inhibitor identified by its ability to inhibit the activity of
CC these proteins, can be used to treat or prevent autoimmune diseases,
CC allergic reactions, infectious diseases, tumour development, inflammatory
CC diseases and/or graft rejection in animals. The present nucleic acid
CC sequence represents a feline interleukin 12 DNA sequence, as described in
CC the invention

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Claim 23; SEQ ID NO 35; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain mature IL-12p35 subunit
CC   protein encoding cDNA.

XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

PT   Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single
PT   chain and canine IL-12 single chain proteins, useful for treating and
PT   preventing autoimmune diseases, inflammatory diseases and/or graft
PT   rejection in animals.
XX
PS   Claim 6; Page 61-62; 106pp; English.
XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
```

```
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

PT   Recombinant feline interleukin-12, useful as immunostimulant and for
PT   treating e.g. viral infections in cats, and related nucleic acid
PT   constructs.
XX
PS   Disclosure; Fig 2; 35pp; German.
XX
CC   This invention describes a novel feline interleukin-12 (fIL-12)
CC   polypeptide (I) that is expressed, by recombinant gene expression in
CC   eukaryotic or prokaryotic cells, in the form of both polypeptide chains
CC   of subunits p35 and p40. These proteins are formed so that, in equimolar
CC   concentrations and in presence of an immunizing antigen, they can be
CC   administered to carnivores, particularly domestic cats. The invention
CC   also describes a nucleic acid construct (II) encoding fIL-12 containing
CC   sequences at least 95% identical with the p40- and p35-encoding sequences
CC   (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
```

```
CC   as immunostimulants for immunization against infectious diseases and/or
CC   for treating infections or tumors in felines, especially domestic cats.
CC   The products of the invention have immunostimulatory, antiviral and
CC   antitumor activity. Nucleic acid constructs that encode (II) are useful
CC   as adjuvants for prophylactic immunization against viral diseases and for
CC   treating diseases associated with a Th1 defect. IL-12 induces synthesis
CC   of interferon gamma (Th1 response). The feline interleukin-12 polypeptide
CC   is useful for carnivores, and particularly domestic cats in the
CC   following: (i) as immunostimulant, for preventative or therapeutic use;
CC   and (ii) treating tumors and autoimmune diseases, or diseases associated
CC   with a Th1 defect, especially pre-existing infections by feline immune
CC   deficiency virus (FIV), feline leukemia virus and corona virus

PT   Vaccine for treating or preventing lentivirus infection in cats, contains
PT   nucleic acid sequence encoding viral protein under control of eukaryotic
PT   promoter.
XX
PS   Claim 14; Page 37; 37pp; German.
XX
CC   This invention describes a novel vaccine (A) for prevention or treatment
CC   of lentivirus infection in felines which comprises an immunizing nucleic
CC   acid sequence (I) that contains, or comprises, at least part of a gene
CC   encoding a protein (II) of the virus, under control of a eukaryotic
CC   promoter functional in the relevant animal. (II) is especially the
CC   envelope (env) protein. The invention also describes (1) vaccine (A)
CC   containing an immunizing protein, or fragment, from a lentivirus plus at
CC   least one of interleukin (IL)-12 and/or -16; and (2) preparation of a
CC   lentivirus protein, or fragment, especially derived from feline immune
CC   deficiency virus (FIV), by expressing the corresponding nucleic acid
CC   sequence in a host cell. The products of the invention have antiviral
CC   activity. The vaccine (A) and related protein-based vaccines, are
CC   particularly used to treat or prevent lentivirus infections in domestic
CC   cats, especially feline immune deficiency virus (FIV). Vaccination with
CC   (A) allows differentiation between vaccinated and infected animals, from
CC   the antibody status. The vaccines may be formulated with an adjuvant
CC   (particularly interleukin-12 and/or IL-16) that elicits a cytotoxic
CC   immune response, particularly a Th1 response

XX
PS   Claim 3; Page 31; 35pp; German.
XX
CC   This invention describes a novel feline interleukin-12 (fIL-12)
CC   polypeptide (I) that is expressed, by recombinant gene expression in
CC   eukaryotic or prokaryotic cells, in the form of both polypeptide chains
CC   of subunits p35 and p40. These proteins are formed so that, in equimolar
CC   concentrations and in presence of an immunizing antigen, they can be
CC   administered to carnivores, particularly domestic cats. The invention
CC   also describes a nucleic acid construct (II) encoding fIL-12 containing
CC   sequences at least 95% identical with the p40- and p35-encoding sequences
CC   (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
CC   as immunostimulants for immunization against infectious diseases and/or
CC   for treating infections or tumors in felines, especially domestic cats.
CC   The products of the invention have immunostimulatory, antiviral and
CC   antitumor activity. Nucleic acid constructs that encode (II) are useful
CC   as adjuvants for prophylactic immunization against viral diseases and for
CC   treating diseases associated with a Th1 defect. IL-12 induces synthesis
CC   of interferon gamma (Th1 response). The feline interleukin-12 polypeptide
CC   is useful for carnivores, and particularly domestic cats in the
CC   following: (i) as immunostimulant, for preventative or therapeutic use;
CC   and (ii) treating tumors and autoimmune diseases, or diseases associated
CC   with a Th1 defect, especially pre-existing infections by feline immune
CC   deficiency virus (FIV), feline leukemia virus and corona virus

XX
CC   The invention relates to nucleic acids encoding modified cytokine
CC   polypeptides (i.e. modified p40 and p35 polypeptides). The modified
CC   cytokine polypeptides have T-cell proliferative and interferon (IFN)-
CC   gamma induction activities. The polypeptides and polynucleotides of the
CC   invention are useful for treating various diseases e.g. bacterial
CC   infections, AIDS, diabetic retinopathy and cancer. The polypeptide and
CC   polynucleotide may also be useful as a vaccine adjuvant, to enhance a
CC   vaccinated host's cell-mediated immunity for protective response to a
CC   pathogen. The present sequence is a modified human p35 protein encoding
CC   DNA

PT   Nucleic acids encoding modified cytokine polypeptides (i.e. modified p40
PT   and p35 polypeptides), useful for treating various diseases e.g. diabetic
PT   retinopathy and cancer.
XX
PS   Claim 87; Page 140; 223pp; English.
XX
CC   The invention relates to nucleic acids encoding modified cytokine
CC   polypeptides (i.e. modified p40 and p35 polypeptides). The modified
CC   cytokine polypeptides have T-cell proliferative and interferon (IFN)-
CC   gamma induction activities. The polypeptides and polynucleotides of the
CC   invention are useful for treating various diseases e.g. bacterial
CC   infections, AIDS, diabetic retinopathy and cancer. The polypeptide and
CC   polynucleotide may also be useful as a vaccine adjuvant, to enhance a
CC   vaccinated host's cell-mediated immunity for protective response to a
CC   pathogen. The present sequence is a modified human p35 protein encoding
CC   DNA

PT   Canine cytokine protein which activates canine cytotoxic T lymphocytes -
PT   is useful for treatment of viral and autoimmune diseases in dogs.
XX
PS   Claim 8; Page 34-35; 51pp; Japanese.
XX
CC   This sequence encodes the canine lymphocyte activation factor (CLAF) of
CC   the invention. CLAF activates lymphocytes, especially canine cytotoxic T
CC   cells. The protein contains a p35 and a p40 subunit. CLAF or antibodies
CC   recognising it may be used in the treatment of viral diseases in dogs
CC   (such as canine distemper, canine parvovirus and canine infectious
CC   hepatitis). The antibodies may also be used in isolation of CLAF from
CC   culture of the transformant host cells by affinity chromatography. The
CC   p40 homodimer can be used for the treatment of autoimmune diseases in
CC   dogs

PT   Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single
PT   chain and canine IL-12 single chain proteins, useful for treating and
PT   preventing autoimmune diseases, inflammatory diseases and/or graft
PT   rejection in animals.
XX
PS   Disclosure; Page 68-69; 106pp; English.
XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a canine interleukin 12 DNA sequence, as described in
CC   the invention

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Example 4; SEQ ID NO 48; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the canine single chain IL-12p35 subunit full-length
CC   complementary DNA.

PT   A prevention and treating agent containing interleukin 12 (CaIL12) - for
PT   prevention and treatment of dog and cat immune diseases.
XX
PS   Claim 1; Page 13; 16pp; Japanese.
XX
CC   The present sequence encodes canine interleukin-12 (IL-12). The
CC   specification describes a method for the prevention and treatment of dog
CC   and cat immune diseases. The treatment used an agent comprising dog IL-12
CC   (CaIL12) proteins to form a heterodimer. The agent is useful for
CC   preventing and treating dog and cat immune diseases, including tumours,
CC   skin diseases, infectious diseases and allergic diseases

XX
```

```
CC   The present sequence encodes canine interleukin-12 (IL-12). The
CC   specification describes a method for the prevention and treatment of dog
CC   and cat immune diseases. The treatment used an agent comprising dog IL-12
CC   (CaIL12) proteins to form a heterodimer. The agent is useful for
CC   preventing and treating dog and cat immune diseases, including tumours,
CC   skin diseases, infectious diseases and allergic diseases

PT   Large scale production of interleukin-12 for pharmaceutical applications,
PT   comprises infecting an insect cell with a recombinant virus containing
PT   gene encoding IL-12, and producing IL-12 by carrying out spinner culture
PT   of insect cell.
XX
PS   Example; SEQ ID NO 6; 8pp; Japanese.
XX
CC   The invention related to the large scale production of interleukin-12 (IL
CC   -12), which involves infecting an insect cell with a recombinant virus
CC   containing a gene encoding IL-12, and producing IL-12 by carrying out
CC   spinner culture of insect cell. The method is useful for producing IL-12,
CC   preferably canine IL-12. IL-12 has pharmaceutical applications. The
CC   present sequence encodes canine IL-12 P35, which is used in the
CC   exemplification of the present invention.

PT   Novel gene vector for expression in insect useful for expression of
PT   foreign gene such as dog interleukin 12 gene, comprises two promoters.
XX
PS   Claim 4; SEQ ID NO 8; 13pp; Japanese.
XX
CC   The invention relates to a novel gene vector for expression in an insect
CC   comprising at least two promoters, particularly the polyhedrin promoter
CC   and p10 promoter. The vector contains at least two types of foreign
CC   protein expression gene and the gene product of the vector is produced
CC   using a gene recombinant baculovirus, particularly a recombinant silkworm
CC   nuclear polyhedrosis virus. The baculovirus is proliferated in a
CC   silkworm. The vector of the invention may be useful for expression of a
CC   foreign gene, such as canine interleukin 12. Within the vector, two types
CC   of foreign protein expression genes are integrated simultaneously for
CC   their simultaneous expression. The current sequence is that of the canine
CC   interleukin-12 (IL-12) p35 DNA of the invention.

PT   Canine cytokine protein which activates canine cytotoxic T lymphocytes -
PT   is useful for treatment of viral and autoimmune diseases in dogs.
XX
PS   Claim 8; Page 33-34; 51pp; Japanese.
XX
CC   This sequence encodes the canine lymphocyte activation factor (CLAF) of
CC   the invention. CLAF activates lymphocytes, especially canine cytotoxic T
CC   cells. The protein contains a p35 and a p40 subunit. CLAF or antibodies
CC   recognising it may be used in the treatment of viral diseases in dogs
CC   (such as canine distemper, canine parvovirus and canine infectious
CC   hepatitis). The antibodies may also be used in isolation of CLAF from
CC   culture of the transformant host cells by affinity chromatography. The
CC   p40 homodimer can be used for the treatment of autoimmune diseases in
CC   dogs

CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC proteins. A composition comprising a feline IL-18, feline caspase-1,
CC feline IL-12 single chain or canine IL-12 single chain proteins, a
CC nucleic acid encoding these proteins, mimetopes of these proteins,
CC multimeric forms of these proteins, an antibody against these proteins,
CC or an inhibitor identified by its ability to inhibit the activity of
CC these proteins, can be used to treat or prevent autoimmune diseases,
CC allergic reactions, infectious diseases, tumour development, inflammatory
CC diseases and/or graft rejection in animals. The present nucleic acid
CC sequence represents a canine interleukin 12 DNA sequence, as described in
CC the invention

PT Recombinant feline interleukin-12, useful as immunostimulant and for
PT treating e.g. viral infections in cats, and related nucleic acid
PT constructs.
XX
PS Example 1b; Page 33; 35pp; German.
XX
CC This invention describes a novel feline interleukin-12 (fIL-12)
CC polypeptide (I) that is expressed, by recombinant gene expression in
CC eukaryotic or prokaryotic cells, in the form of both polypeptide chains
CC of subunits p35 and p40. These proteins are formed so that, in equimolar
CC concentrations and in presence of an immunizing antigen, they can be
CC administered to carnivores, particularly domestic cats. The invention
CC also describes a nucleic acid construct (II) encoding fIL-12 containing
CC sequences at least 95% identical with the p40- and p35-encoding sequences
CC (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
CC as immunostimulants for immunization against infectious diseases and/or
CC for treating infections or tumors in felines, especially domestic cats.

CC The products of the invention have immunostimulatory, antiviral and
CC antitumor activity. Nucleic acid constructs that encode (II) are useful
CC as adjuvants for prophylactic immunization against viral diseases and for
CC treating diseases associated with a Th1 defect. IL-12 induces synthesis
CC of interferon gamma (Th1 response). The feline interleukin-12 polypeptide
CC is useful for carnivores, and particularly domestic cats in the
CC following: (i) as immunostimulant, for preventative or therapeutic use;
CC and (ii) treating tumors and autoimmune diseases, or diseases associated
CC with a Th1 defect, especially pre-existing infections by feline immune
CC deficiency virus (FIV), feline leukemia virus and corona virus

PT Identifying an individual who has an altered risk for developing
PT myocardial infarction by detecting a single nucleotide polymorphism in
PT the individual's nucleic acids.
XX
PS Claim 7; SEQ ID NO 3488; 145pp; English.
XX
CC The invention relates to a novel method for identifying an individual who
CC has an altered risk for developing myocardial infarction. The method
CC comprises detecting a single nucleotide polymorphism (SNP) in any one of
CC the nucleotide sequences given in the specification in the individual's
CC nucleic acids, where the presence of the SNP is correlated with an
CC altered risk for myocardial infarction in the individual. The invention
CC further comprises: an isolated nucleic acid molecule comprising at least

CC 8 contiguous nucleotides where one of the nucleotides is an SNP given in
CC the specification or its complement and encoding any one of the amino
CC acid sequences given in the specification; an isolated polypeptide
CC comprising an amino acid sequence given in the specification; an antibody
CC that specifically binds to the polypeptide or its antigen-binding
CC fragment; an amplified polynucleotide containing an SNP given in the
CC specification and which is between about 16 and 1000 nucleotides in
CC length; a kit for detecting an SNP in a nucleic acid, comprising the
CC polynucleotide, a buffer and an enzyme; a method of detecting an SNP in a
CC nucleic acid molecule; a method of detecting a variant polypeptide; and a
CC method for identifying an agent useful in treating or preventing
CC myocardial infarction. The novel detection method has cardiant activity.
CC The nucleic acids of the invention may be used in gene therapy. The
CC method is useful in identifying an individual who has an increased or
CC decreased risk for developing myocardial infarction and for preparing a
CC composition for treating or preventing myocardial infarction. This
CC polynucleotide sequence represents a transcript-based context sequence
CC which flanks an SNP found in a human myocardial infarction-associated
CC gene of the invention. Note: This sequence was not shown in the
CC specification. The sequence has come from an electronic sequence listing
CC downloaded from the WIPO website.

CC comprises detecting a single nucleotide polymorphism (SNP) in any one of
CC the nucleotide sequences given in the specification in the individual's
CC nucleic acids, where the presence of the SNP is correlated with an
CC altered risk for myocardial infarction in the individual. The invention
CC further comprises: an isolated nucleic acid molecule comprising at least
CC 8 contiguous nucleotides where one of the nucleotides is an SNP given in
CC the specification or its complement and encoding any one of the amino
CC acid sequences given in the specification; an isolated polypeptide
CC comprising an amino acid sequence given in the specification; an antibody
CC that specifically binds to the polypeptide or its antigen-binding
CC fragment; an amplified polynucleotide containing an SNP given in the
CC specification and which is between about 16 and 1000 nucleotides in
CC length; a kit for detecting an SNP in a nucleic acid, comprising the
CC polynucleotide, a buffer and an enzyme; a method of detecting an SNP in a
CC nucleic acid molecule; a method of detecting a variant polypeptide; and a
CC method for identifying an agent useful in treating or preventing
CC myocardial infarction. The novel detection method has cardiant activity.
CC The nucleic acids of the invention may be used in gene therapy. The
CC method is useful in identifying an individual who has an increased or
CC decreased risk for developing myocardial infarction and for preparing a
CC composition for treating or preventing myocardial infarction. This
CC polynucleotide sequence represents a transcript-based context sequence
CC which flanks an SNP found in a human myocardial infarction-associated
CC gene of the invention. Note: This sequence was not shown in the
CC specification. The sequence has come from an electronic sequence listing
CC downloaded from the WIPO website.

PT   Novel protein comprising cytotoxic lymphocyte maturation factor in
PT   substantially pure form or protein which exhibits cytotoxic lymphocyte
PT   maturation factor activity, useful as antitumor and immunoenhancing
PT   agent.
XX
PS   Claim 20; Page 29; 74pp; English.
XX
CC   The invention relates to a protein which comprises a cytotoxic lymphocyte
CC   maturation factor (CLMF). The protein is useful for stimulating activated
CC   T-cells which involves treating T-cells with the protein. The method
CC   further involves treating the activated T-cells with IL2 or its
CC   biologically active fragment. The protein is useful for stimulating
CC   natural killer cells which involves treating the natural killer cells
CC   with the protein. The protein has immunoenhancing and antitumour effects
CC   when used as single therapeutic agent in vivo. The present sequence is
CC   used in the exemplification of the present invention.

XX
CC   AAQ97484 and AAQ97485 are from human lymphoblast cell line RMPI 8866. IL-
CC   12 is a heterodimeric cytokine which was originally identified as a
CC   factor which induces gamma-interferon from T cells and natural killer
CC   cells as set forth in PCT/US91/06332, published April 2 1992, and
CC   incorporated by reference. EP 433827, published June 26 1991, disclosed
CC   IL-12 as a cytotoxin lymphocyte maturation factor. In the patent, IL-12
CC   is defined as a heterodimeric glycoprotein comprised of two covalently
CC   linked subunits having mol. wts of about 40 kD and 35 kD. The two
CC   subunits may be disulfide-bonded. IL-12 is administered to prevent or
CC   ameliorate GVHD. Dosage is 1 ng-0.1 mg (esp. 1.0 ng-1 microg)/kg daily
CC   for 3 days, the first dose given 1 hr. after transplant. IL-12 can be
CC   used as the native heterodimer or as subunits. (Updated on 25-MAR-2003 to
CC   correct PN field.)

PT   Therapy of graft-versus-host disease - by administration of interleukin-
PT   12 to maintain and/or promote graft-versus-leukaemia effects.
XX
PS   Disclosure; Col 23-24; 20pp; English.
XX
CC   The invention relates to a method for the treatment or prevention of
CC   graft-versus-host disease (GVHD) which comprises the administration of
CC   interleukin-12 (IL-12) at the time of bone-marrow transplantation to
CC   maintain or promote graft-versus-leukaemia effects. Preferably, dosage is
CC   0.001-100 (preferably 1-100) mu g/kg for 3 days starting on the day of
CC   the bone marrow transplant. IL-12 is administered daily until there is an
CC   improvement in the condition. Administration is oral, cutaneous,
CC   subcutaneous, intravenous or by inhalation preferably subcutaneous, or
CC   intravenous. The present sequence encodes the human interleukin-12 35kDa
CC   subunit

PT   New interleukin 12A (IL-12A) gene polymorphic variants, for studying the
PT   expression and function of IL-12A and screening candidate drugs for
PT   treating AIDS and cancer.
XX
PS   Claim 28; Fig 2; 72pp; English.
XX
CC   The invention comprises the amino acid and coding sequence of the human
CC   interleukin 12A (IL-12A) protein. Specifically the invention relates to
CC   the identification of polymorphisms within the human (IL-12A) gene
CC   sequence. The polymorphisms identified in the human IL-12A gene sequence
CC   are useful in studying the expression and function of IL-12A, and in
CC   screening drugs for the treatment of disorders such as AIDS, malaria,
CC   tuberculosis and cancer. The IL-12A polymorphisms may be used to
CC   haplotype and genotype the IL-12A gene of an individual. The IL-12A DNA
CC   sequences of the invention can be used to create transgenic animals for
CC   studying expression of the IL-12A isogenes in vivo. The present DNA
CC   sequence represents the coding sequence of the human interleukin 12A (IL-
CC   12A) gene

PT Human interleukin-12 recombinant insect virus strain and its preparation.
XX
PS Claim 4; Fig 6; 17pp; Chinese.
XX
CC The invention relates to a recombinant baculovirus comprising DNA
CC encoding human interleukin 12 (hIL-12) and methods for its preparation.
CC The recombinant baculovirus strain is designated Autographa california
CC nuclear polyhedrosis virus AcNPV-hIL12 (CCTCC No. 2 V200108). This strain
CC contains two human IL-12 subunit genes, the IL-12 P35 subunit gene
CC (ACC47589) and the IL-12 P40 subunit gene (ACC47592) which are
CC respectively under the control of the viral polyhedrin and P10 promoters.
CC The baculovirus can be used in the recombinant production of human IL-12
CC which is suitable for treating tumours and bacterial, viral and other
CC infections. The present sequence represents the human IL-12 P35 subunit
CC gene used in construction of the baculovirus vector of the invention

PT   Attenuated recombinant virus used for cancer therapy - comprises DNA
PT   encoding cytokine and/or tumour associated antigen.
XX
PS   Example 27; Fig 34; 232pp; English.
XX
CC   The sequences given in AAQ67879-80 are expression cassettes which contain
CC   the p40 and p35 subunits of human interleukin-12 (IL-12) under the
CC   control of the entomopox virus (EPV) promoter and the vaccinia E3L
CC   promoter, respectively. These sequences were used in the construction of
CC   an ALVAC-based recombinant virus containing the genes for the two
CC   subunits of human IL-12. The p40 subunit was amplified using primers
CC   JP202 and JP189 and placed under the control of the entomopox virus (EPV)
CC   42 kD promoter in plasmid PBSHIL12p40II. The p35 subunit was amplified
CC   using primers JP186 and JP201 and placed under the control of the
CC   vaccinia E3L promoter using primers JP218 and JP220. The expression
CC   cassette was isolated and ligated with pBSSK+ generating plasmid
CC   PBSHIL12p35II. The p35 and p40 expression cassettes were excised and
CC   assembled in pBSSK+ to give PBSHIL12 in which the two expression
CC   cassettes are orientated head-to-head relative to each other. The
CC   combination casette containing the poxvirus promoted genes for both IL-12
CC   subunits was excised from PBSHIL12 and cloned in to ALVAC C6 vector
CC   plasmid pC6L to give pC6HIL12. Recombination between this donor plasmid
CC   and ALVAC rescuing virus produced recombinant virus ALVAC+IL12, which
CC   contains both the human IL-12 genes in the C6 locus. The resulting virus
CC   may be used in a composition for inducing an antigenic or immunological
CC   response, ie. for immunisation against pathogens. (Updated on 25-MAR-2003
CC   to correct PN field.)

PT Recombinant poxviruses comprising exogenous DNA encoding antigenic
PT determinants useful in immunotherapy to immunize against cancers and
PT other diseases such as influenza, Newcastle Disease and rabies.
XX
PS Example 27; Fig 34; 163pp; English.
XX
CC The present invention describes a recombinant poxvirus (I), comprising
CC exogenous DNA encoding an antigenic determinant of a pathogen which is
CC then expressed in vivo in infected host cells after administration to a
CC patient and therefore induces an immunological response. (I) may be used
CC to vaccinate patients against a wide range of diseases and disorders
CC depending on the type of antigen encoded by the exogenous DNA. (I) may be
CC used to vaccinate against diseases such as rabies, influenza and
CC Newcastle Disease. It is particularly useful for immunising against
CC cancers. The poxvirus (I) also provides a means of manipulating
CC lymphocytes and tumour cells for use in cell-based immunotherapeutic
CC modalities for cancer. (I) also have enhanced safety compared to
CC unattenuated viruses (attenuation reduces the virulence of the viruses)
CC and known recombinant poxvirus vaccines. This increased level of safety
CC reduces the possibility of a 'runaway' infection in the host and reduces
CC the chance of transmission from vaccinated to unvaccinated individuals
CC and contamination of the environment. The present sequence represents a
CC Vaccinia E3L/human IL-12 P35 expression cassette used in the
CC exemplification of the present invention

PT New recombinant poxvirus which is an attenuated avipox Virus that
PT expresses an exogenous DNA encoding carcinoembryonic antigen and an
PT exogenous DNA encoding B7 protein, useful for cancer therapy.
XX
PS Example 27; SEQ ID NO 199; 181pp; English.
XX
CC The invention describes a recombinant poxvirus containing exogenous DNA
CC in a nonessential region of the poxvirus, where the poxvirus is an
CC attenuated avipox Virus that expresses an exogenous DNA encoding
CC carcinoembryonic antigen and an exogenous DNA encoding B7 protein. Also
CC described are: a composition comprising a poxvirus above in admixture
CC with a carrier; and expressing carcinoembryonic antigen and B7 protein in
CC vivo comprising administering to a mammal the composition above.
CC Disclosed are: making recombinant poxvirus defined above; recombinant
CC poxvirus vaccine having an increased level of safety compared to known
CC recombinant poxvirus vaccines; and a modified vector for expressing a
CC gene product in a host. The recombinant poxvirus is useful for providing
CC a recombinant poxvirus vaccine having an increased level of safety
CC compared to known recombinant poxvirus vaccines. The recombinant poxvirus
CC is useful for cancer therapy. This sequence represents a human IL-12
CC expression cassette used in the creation of NYVAC rescue virus and
CC canarypox virus vector ALVAC comprising the human IL-12 gene.

PT Method for efficiently expressing recombinant human interleukin 12 in
PT eukaryotic cell.
XX
PS Claim 6; SEQ ID NO 3; 14pp; Chinese.
XX
CC The invention describes the process of producing human recombinant
CC interleukin-12 (IL-12) includes: providing a nucleotide sequence
CC corresponding to the P35 subunit with the first signal peptide and a
CC nucleotide sequence corresponding to the P40 subunit; inserting the
CC nucleotide sequences into an expression vector; converting the eukaryotic
CC cell with the expression vector; and culturing the transfected eukaryotic
CC cell in condition suitable for recombinant human IL-12 expression. The
CC process balances the expression amount of both P35 and P40 subunits and
CC thus raises the expression amount of IL-12 with bioactivity via raising
CC the expression strength of P35 subunit. This sequence represents the
CC human interleukin-12 (IL-12) P35 subunit polynucleotide.

```
XX
CC   Immunodeficient mice comprising human cells can be used for exposure to
CC   human pathogens and/or their components or human tumour cells and human
CC   peripheral blood lymphocytes. Also claimed is a vaccine comprising a cell
CC   modified to express an antigen and an immune-modulating protein, this is
CC   preferably an expression vector comprising a polynucleotide sequence that
CC   encodes the antigen and immune-modulating protein. Such vectors can be
CC   used to treat a subject having a tumour by transferring the expression
CC   vector into the tumour so that the antigen and the immune-modulator are
CC   expressed by at least the tumour. The methods can be used for producing
CC   and evaluating vaccines including cancer vaccines and vaccines directed
CC   against human pathogens, e.g. HIV, Leishmania, Mycobacterium, Listeria or
CC   Plasmodium. Two primers (AAV83197, AAV83198) were used to amplify the IL-
CC   12B for insertion into expression vectors of the invention

PT   New antisense oligonucleotides useful for treating e.g. pulmonary
PT   vasoconstruction, inflammation, allergies, asthma, hypertension,
PT   bronchitis, emphysema, respiratory distress syndrome, ischemia or
PT   cancers.
XX
PS   Disclosure; Page 1242; 1343pp; English.
XX
CC   The present invention describes a new composition comprising an antisense
CC   oligonucleotide (ON) with low adenosine (up to 15%), which targets
CC   nucleic acids involved in bronchoconstriction, allergies, and/or
CC   inflammation. The ON can have antiinflammatory, antiallergic,
CC   antiasthmatic, cytostatic and analgesic activities. The compositions are
CC   useful for the treatment of diseases associated with inflammation,
CC   impaired airways, including lung disease and diseases whose secondary
CC   effects afflict the lungs of a subject. They can be used for treating
CC   e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma,
CC   impeded respiration, respiratory distress syndrome, pain, cystic
CC   fibrosis, pulmonary hypertension, emphysema, chronic obstructive
CC   pulmonary disease (COPD), and cancers such as leukaemias, lymphomas,
CC   carcinomas, and cancers which may metastasise to the lungs, including
CC   breast and prostate cancer. The reduction of the adenosine content of the
CC   ONs reduces side effects. The A-containing ONs break down with the
CC   release of deoxyadenosine which activates adenosine receptors causing
CC   bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the
CC   nucleotide sequences given in the sequence listing from the present
CC   invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185
CC   sequences are also called SEQ ID NO:1 to 185, but the sequences differ
CC   from the previously named sequences. SEQ ID NO:11 to 1680 (AAA32323 to
CC   AAA33992) are specifically claimed ONs from the present invention. N.B.
CC   Sequences given in the disclosure of the present invention do not match
CC   up with their corresponding SEQ ID NO: sequences given in the sequence
CC   listing

XX
CC   The present invention describes low adenosine (A) content antisense
CC   oligonucleotides and compositions (I) comprising them. In the antisense
CC   oligonucleotides the A is replaced by a 'Universal' or alternative base.
CC   (I) can have respiratory, bronchodilator, antiinflammatory, analgesic,
CC   immunosuppressive, antiasthmatic, hypotensive and cytostatic activities.
CC   The antisense oligonucleotides and (I) can be used to down-regulate the
CC   expression and or activity of target polypeptides associated with
CC   lung/respiratory disorders and malignancies, such as stimulating and
CC   activating peptide factors and transmitters, transcription factors,
CC   immunoglobulins and antibodies, antibody receptors, cytokines and
CC   chemokines, endogenously produced specific and non-specific enzymes,
CC   binding proteins, adhesion molecules and their receptors, cytokine and
CC   chemokine receptors, adenosine receptors, bradykinin receptors, central
CC   nervous system (CNS) and peripheral nervous and non-nervous system
CC   receptors, CNS and peripheral nervous and non-nervous system peptide
CC   transmitters, defensins, growth factors, vasoactive peptides and
CC   receptors, binding proteins and malignancy associated proteins. The
CC   antisense oligonucleotides may be used in this way to treat disorders
CC   including respiratory obstruction (especially pulmonary obstruction
CC   and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or
CC   surfactant hypoproduction which are associated with a disease or
CC   condition selected from pulmonary vasoconstriction, inflammation,
CC   allergies, asthma, impeded respiration, respiratory distress syndrome
CC   (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary
CC   hypertension, emphysema, chronic obstructive pulmonary disease (COPD),
CC   pulmonary transplantation rejection, pulmonary infections, bronchitis,
CC   and/or cancer. AAF18434 to AAF21543 represent human polynucleotide
CC   fragments and antisense oligonucleotides used in the exemplification of
CC   the present invention

PT   Pharmaceutical composition for treating ailments associated with impaired
PT   respiration, has oligo(s) antisense to specific gene(s) or its
PT   corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
PT   ubiquinone.
XX
PS   Disclosure; SEQ ID NO 12259; 872pp; English.
XX
CC   The invention relates to a novel pharmaceutical composition, which has a
CC   first active agent comprising an oligonucleotide antisense to the
CC   initiation codon, coding region, 5' or 3' end genomic flanking regions,
CC   5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
CC   junctions of genes encoding a polypeptide associated with lung and/or
CC   nasal airway dysfunction and a second active agent comprising an
CC   antiinflammatory steroid and ubiquinone. A composition of the invention
CC   has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
CC   immunosuppressive, and cytostatic activity. The composition may have a
CC   use in antisense gene therapy. The composition is useful for treating or
CC   preventing a respiratory, lung or malignant disease or condition, also
CC   for enhancing the prophylactic or therapeutic respiratory effect of an
CC   antiinflammatory steroid in a subject, for reducing or depleting levels
CC   of, or reducing sensitivity to adenosine, reducing levels of adenosine
CC   receptor, producing bronchodilation, increasing levels of ubiquinone or
CC   lung surfactant in a subject's tissue, or treating bronchoconstriction,
CC   lung inflammation, lung allergies, or a respiratory disease or condition.
CC   Note: The sequence data for this patent is not represented in the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

XX
PT Pharmaceutical composition for treating asthma, has antisense
PT oligonucleotide containing less percentage of adenosine, targeted to
PT nucleic acids associated with lung airway or lung dysfunction, and
PT bronchodilating agent.
XX
PS Claim 15; SEQ ID NO 12259; 763pp; English.
XX
CC This invention describes a novel composition (a) a first active agent,
CC comprising oligonucleotides, effective for alleviating
CC bronchoconstriction, respiratory tract inflammation, allergies and
CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC surfactant depletion or hyposecretion, when administered to a mammal. The
CC oligonucleotides are derived from a gene encoding or regulating
CC expression of a target polypeptide associated with lung airway or lung
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC The invention also describes a kit, that comprises: (a) a delivery
CC device, in separate containers, (b) the oligonucleotides, (c)
CC instructions for adding a carrier and for use of the kit. The composition
CC of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC beta-adrenergic agonist. The composition is useful for preventing or
CC treating a respiratory, lung or malignant disease. The administered
CC composition comprises oligo and is administered to reduce the production
CC or availability, or to increase the degradation of the target mRNA or to
CC reduce the amount of target polypeptide present in the lungs. The
CC pulmonary obstruction, and/or bronchoconstriction and/or lung
CC inflammation, allergies and/or surfactant hypoproduction are associated
CC with a disease or condition such as pulmonary vasoconstriction,
CC inflammation, allergies, asthma, impeded respiration, respiratory
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
CC transplantation rejection, pulmonary infections, bronchitis or cancer.
CC The reduced adenosine content of the anti-sense oligos corresponding to
CC thymidines present in the target RNA serves to prevent the breakdown of
CC the oligonucleotides into products that free adenosine into the system
CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
CC prevent any unwanted effects due to it

PT Viral vector that expresses single-chain interleukin-12 and costimulator,
PT useful for treatment of tumors, viral infections, e.g. human
PT immunodeficiency virus, and prion diseases.
XX
PS Claim 4; Fig 20; 129pp; German.
XX
CC The present invention relates to a viral vector that includes a nucleic
CC acid encoding a single-chain interleukin-12 (IL-12) and a co-stimulatory
CC protein. Viral vectors and virus particles derived from them are useful
CC for treatment of tumours, infectious diseases (e.g. HIV, hepatitis A, B
CC or C, cytomegalovirus or human papilloma virus), or prion diseases. The
CC present sequence is a human interleukin-12 coding sequence used in the
CC exemplification of the invention.

PT Inhibiting or treating a tumor, metastasis or infectious lesion comprises
PT administering into or near site of a tumor or infectious lesion an
PT antigen presenting cell and an immunostimulatory cytokine or a nucleic
PT acid encoding the cytokine.
XX
PS Disclosure; SEQ ID NO 57; 169pp; English.
XX
CC This invention relates to a novel method of inhibiting or treating a
CC tumour, metastasis or infectious lesion in a subject which comprises
CC administering into or near a site of a tumour or infectious lesion in a
CC subject an antigen presenting cell and an immunostimulatory cytokine or a
CC nucleic acid encoding the cytokine. The invention may be useful for the
CC production of compounds with a cytostatic or vulnerary activity acting as
CC immunomodulators. The method is useful in inhibiting or treating a
CC tumour, metastasis or infectious lesion in a subject, where the size of
CC the tumour, metastasis (where number is also decreased) or infectious
CC lesion is decreased. The tumour is selected from melanoma, hepatoma,
CC adenocarcinoma, colorectal cancer, basal cell cancer, oral cancer,
CC nasopharyngeal cancer, laryngeal cancer, bladder cancer, head and neck
CC cancer, renal cell cancer, pancreatic cancer, pulmonary cancer, cervical
CC cancer, ovarian cancer, oesophageal cancer, gastric cancer, prostrate
CC cancer, testicular cancer and breast cancer. The present sequence is that
CC of a gene which is related to the invention.

PT Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single
PT chain and canine IL-12 single chain proteins, useful for treating and
PT preventing autoimmune diseases, inflammatory diseases and/or graft
PT rejection in animals.
XX
PS Claim 1; Page 56-57; 106pp; English.
XX
CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC proteins. A composition comprising a feline IL-18, feline caspase-1,
CC feline IL-12 single chain or canine IL-12 single chain proteins, a
CC nucleic acid encoding these proteins, mimetopes of these proteins,
CC multimeric forms of these proteins, an antibody against these proteins,
CC or an inhibitor identified by its ability to inhibit the activity of
CC these proteins, can be used to treat or prevent autoimmune diseases,
CC allergic reactions, infectious diseases, tumour development, inflammatory
CC diseases and/or graft rejection in animals. The present nucleic acid
CC sequence represents a feline interleukin 12 DNA sequence, as described in
CC the invention

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Claim 23; SEQ ID NO 35; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain mature IL-12p35 subunit
CC   protein encoding cDNA.

CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Example 3; SEQ ID NO 45; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain IL-12 complementary DNA.

CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC proteins. A composition comprising a feline IL-18, feline caspase-1,
CC feline IL-12 single chain or canine IL-12 single chain proteins, a
CC nucleic acid encoding these proteins, mimetopes of these proteins,
CC multimeric forms of these proteins, an antibody against these proteins,
CC or an inhibitor identified by its ability to inhibit the activity of
CC these proteins, can be used to treat or prevent autoimmune diseases,
CC allergic reactions, infectious diseases, tumour development, inflammatory
CC diseases and/or graft rejection in animals. The present nucleic acid
CC sequence represents a feline interleukin 12 DNA sequence, as described in
CC the invention

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Claim 24; SEQ ID NO 38; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain IL-12 protein encoding cDNA.

CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Claim 23; SEQ ID NO 32; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain IL-12p35 subunit protein
CC   encoding full-length cDNA.

CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC proteins. A composition comprising a feline IL-18, feline caspase-1,
CC feline IL-12 single chain or canine IL-12 single chain proteins, a
CC nucleic acid encoding these proteins, mimetopes of these proteins,
CC multimeric forms of these proteins, an antibody against these proteins,
CC or an inhibitor identified by its ability to inhibit the activity of
CC these proteins, can be used to treat or prevent autoimmune diseases,
CC allergic reactions, infectious diseases, tumour development, inflammatory
CC diseases and/or graft rejection in animals. The present nucleic acid
CC sequence represents a feline interleukin 12 DNA sequence, as described in
CC the invention

XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline N-terminal single chain IL-12p35 subunit
CC   protein encoding cDNA.

PT   Recombinant feline interleukin-12, useful as immunostimulant and for
PT   treating e.g. viral infections in cats, and related nucleic acid
PT   constructs.
XX
PS   Disclosure; Fig 2; 35pp; German.
XX
CC   This invention describes a novel feline interleukin-12 (fIL-12)
CC   polypeptide (I) that is expressed, by recombinant gene expression in
CC   eukaryotic or prokaryotic cells, in the form of both polypeptide chains
CC   of subunits p35 and p40. These proteins are formed so that, in equimolar
CC   concentrations and in presence of an immunizing antigen, they can be
CC   administered to carnivores, particularly domestic cats. The invention
CC   also describes a nucleic acid construct (II) encoding fIL-12 containing
CC   sequences at least 95% identical with the p40- and p35-encoding sequences
CC   (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
CC   as immunostimulants for immunization against infectious diseases and/or
CC   for treating infections or tumors in felines, especially domestic cats.
CC   The products of the invention have immunostimulatory, antiviral and
CC   antitumor activity. Nucleic acid constructs that encode (II) are useful
CC   as adjuvants for prophylactic immunization against viral diseases and for
CC   treating diseases associated with a Th1 defect. IL-12 induces synthesis
CC   of interferon gamma (Th1 response). The feline interleukin-12 polypeptide
CC   is useful for carnivores, and particularly domestic cats in the
CC   following: (i) as immunostimulant, for preventative or therapeutic use;
CC   and (ii) treating tumors and autoimmune diseases, or diseases associated
CC   with a Th1 defect, especially pre-existing infections by feline immune
CC   deficiency virus (FIV), feline leukemia virus and corona virus

PT   Vaccine for treating or preventing lentivirus infection in cats, contains
PT   nucleic acid sequence encoding viral protein under control of eukaryotic
PT   promoter.
XX
PS   Claim 14; Page 37; 37pp; German.
XX
CC   This invention describes a novel vaccine (A) for prevention or treatment
CC   of lentivirus infection in felines which comprises an immunizing nucleic
CC   acid sequence (I) that contains, or comprises, at least part of a gene
CC   encoding a protein (II) of the virus, under control of a eukaryotic
CC   promoter functional in the relevant animal. (II) is especially the
CC   envelope (env) protein. The invention also describes (1) vaccine (A)
CC   containing an immunizing protein, or fragment, from a lentivirus plus at
CC   least one of interleukin (IL)-12 and/or -16; and (2) preparation of a
CC   lentivirus protein, or fragment, especially derived from feline immune
CC   deficiency virus (FIV), by expressing the corresponding nucleic acid
CC   sequence in a host cell. The products of the invention have antiviral
CC   activity. The vaccine (A) and related protein-based vaccines, are
CC   particularly used to treat or prevent lentivirus infections in domestic
CC   cats, especially feline immune deficiency virus (FIV). Vaccination with
CC   (A) allows differentiation between vaccinated and infected animals, from
CC   the antibody status. The vaccines may be formulated with an adjuvant
CC   (particularly interleukin-12 and/or IL-16) that elicits a cytotoxic
CC   immune response, particularly a Th1 response

PT   Recombinant feline interleukin-12, useful as immunostimulant and for
PT   treating e.g. viral infections in cats, and related nucleic acid
PT   constructs.
XX
PS   Claim 3; Page 31; 35pp; German.
XX
CC   This invention describes a novel feline interleukin-12 (fIL-12)
CC   polypeptide (I) that is expressed, by recombinant gene expression in
CC   eukaryotic or prokaryotic cells, in the form of both polypeptide chains
CC   of subunits p35 and p40. These proteins are formed so that, in equimolar
CC   concentrations and in presence of an immunizing antigen, they can be
CC   administered to carnivores, particularly domestic cats. The invention
CC   also describes a nucleic acid construct (II) encoding fIL-12 containing
CC   sequences at least 95% identical with the p40- and p35-encoding sequences
CC   (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
CC   as immunostimulants for immunization against infectious diseases and/or
CC   for treating infections or tumors in felines, especially domestic cats.
CC   The products of the invention have immunostimulatory, antiviral and
CC   antitumor activity. Nucleic acid constructs that encode (II) are useful
CC   as adjuvants for prophylactic immunization against viral diseases and for
```

```
CC   treating diseases associated with a Th1 defect. IL-12 induces synthesis
CC   of interferon gamma (Th1 response). The feline interleukin-12 polypeptide
CC   is useful for carnivores, and particularly domestic cats in the
CC   following: (i) as immunostimulant, for preventative or therapeutic use;
CC   and (ii) treating tumors and autoimmune diseases, or diseases associated
CC   with a Th1 defect, especially pre-existing infections by feline immune
CC   deficiency virus (FIV), feline leukemia virus and corona virus

PT   Nucleic acids encoding modified cytokine polypeptides (i.e. modified p40
PT   and p35 polypeptides), useful for treating various diseases e.g. diabetic
PT   retinopathy and cancer.
XX
PS   Claim 87; Page 139; 223pp; English.
XX
CC   The invention relates to nucleic acids encoding modified cytokine
CC   polypeptides (i.e. modified p40 and p35 polypeptides). The modified
CC   cytokine polypeptides have T-cell proliferative and interferon (IFN)-
CC   gamma induction activities. The polypeptides and polynucleotides of the
CC   invention are useful for treating various diseases e.g. bacterial
CC   infections, AIDS, diabetic retinopathy and cancer. The polypeptide and
CC   polynucleotide may also be useful as a vaccine adjuvant, to enhance a
CC   vaccinated host's cell-mediated immunity for protective response to a
CC   pathogen. The present sequence is a modified human p35 protein encoding
CC   DNA

PT Recombinant feline interleukin-12, useful as immunostimulant and for
PT treating e.g. viral infections in cats, and related nucleic acid
PT constructs.
XX
PS Disclosure; Fig 2; 35pp; German.
XX
CC This invention describes a novel feline interleukin-12 (fIL-12)
CC polypeptide (I) that is expressed, by recombinant gene expression in
CC eukaryotic or prokaryotic cells, in the form of both polypeptide chains
CC of subunits p35 and p40. These proteins are formed so that, in equimolar
CC concentrations and in presence of an immunizing antigen, they can be
CC administered to carnivores, particularly domestic cats. The invention
CC also describes a nucleic acid construct (II) encoding fIL-12 containing
CC sequences at least 95% identical with the p40- and p35-encoding sequences
CC (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
CC as immunostimulants for immunization against infectious diseases and/or
CC for treating infections or tumors in felines, especially domestic cats.
CC The products of the invention have immunostimulatory, antiviral and
CC antitumor activity. Nucleic acid constructs that encode (II) are useful
CC as adjuvants for prophylactic immunization against viral diseases and for
CC treating diseases associated with a Th1 defect. IL-12 induces synthesis
CC of interferon gamma (Th1 response). The feline interleukin-12 polypeptide
CC is useful for carnivores, and particularly domestic cats in the
CC following: (i) as immunostimulant, for preventative or therapeutic use;
CC and (ii) treating tumors and autoimmune diseases, or diseases associated
CC with a Th1 defect, especially pre-existing infections by feline immune
CC deficiency virus (FIV), feline leukemia virus and corona virus

PT   Nucleic acids encoding modified cytokine polypeptides (i.e. modified p40
PT   and p35 polypeptides), useful for treating various diseases e.g. diabetic
PT   retinopathy and cancer.
XX
PS   Claim 87; Page 140; 223pp; English.
XX
CC   The invention relates to nucleic acids encoding modified cytokine
CC   polypeptides (i.e. modified p40 and p35 polypeptides). The modified
CC   cytokine polypeptides have T-cell proliferative and interferon (IFN)-
CC   gamma induction activities. The polypeptides and polynucleotides of the
CC   invention are useful for treating various diseases e.g. bacterial
CC   infections, AIDS, diabetic retinopathy and cancer. The polypeptide and
CC   polynucleotide may also be useful as a vaccine adjuvant, to enhance a
CC   vaccinated host's cell-mediated immunity for protective response to a
CC   pathogen. The present sequence is a modified human p35 protein encoding
CC   DNA

PT   Canine cytokine protein which activates canine cytotoxic T lymphocytes -
PT   is useful for treatment of viral and autoimmune diseases in dogs.
XX
PS   Claim 8; Page 34-35; 51pp; Japanese.
XX
CC   This sequence encodes the canine lymphocyte activation factor (CLAF) of
CC   the invention. CLAF activates lymphocytes, especially canine cytotoxic T
CC   cells. The protein contains a p35 and a p40 subunit. CLAF or antibodies
```

```
CC   recognising it may be used in the treatment of viral diseases in dogs
CC   (such as canine distemper, canine parvovirus and canine infectious
CC   hepatitis). The antibodies may also be used in isolation of CLAF from
CC   culture of the transformant host cells by affinity chromatography. The
CC   p40 homodimer can be used for the treatment of autoimmune diseases in
CC   dogs

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Example 4; SEQ ID NO 48; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the canine single chain IL-12p35 subunit full-length
CC   complementary DNA.

PT   prevention and treatment of dog and cat immune diseases.
XX
PS   Claim 1; Page 15-16; 16pp; Japanese.
XX
CC   The present sequence encodes canine interleukin-12 (IL-12). The
CC   specification describes a method for the prevention and treatment of dog
CC   and cat immune diseases. The treatment used an agent comprising dog IL-12
CC   (CaIL12) proteins to form a heterodimer. The agent is useful for
CC   preventing and treating dog and cat immune diseases, including tumours,
CC   skin diseases, infectious diseases and allergic diseases

PT   Large scale production of interleukin-12 for pharmaceutical applications,
PT   comprises infecting an insect cell with a recombinant virus containing
PT   gene encoding IL-12, and producing IL-12 by carrying out spinner culture
PT   of insect cell.
XX
PS   Example; SEQ ID NO 6; 8pp; Japanese.
XX
CC   The invention related to the large scale production of interleukin-12 (IL
CC   -12), which involves infecting an insect cell with a recombinant virus
CC   containing a gene encoding IL-12, and producing IL-12 by carrying out
CC   spinner culture of insect cell. The method is useful for producing IL-12,
CC   preferably canine IL-12. IL-12 has pharmaceutical applications. The
CC   present sequence encodes canine IL-12 P35, which is used in the
CC   exemplification of the present invention.

PT   Novel gene vector for expression in insect useful for expression of
PT   foreign gene such as dog interleukin 12 gene, comprises two promoters.
XX
```

PS Claim 4; SEQ ID NO 8; 13pp; Japanese.
XX
CC The invention relates to a novel gene vector for expression in an insect
CC comprising at least two promoters, particularly the polyhedrin promoter
CC and p10 promoter. The vector contains at least two types of foreign
CC protein expression gene and the gene product of the vector is produced
CC using a gene recombinant baculovirus, particularly a recombinant silkworm
CC nuclear polyhedrosis virus. The baculovirus is proliferated in a
CC silkworm. The vector of the invention may be useful for expression of a
CC foreign gene, such as canine interleukin 12. Within the vector, two types
CC of foreign protein expression genes are integrated simultaneously for
CC their simultaneous expression. The current sequence is that of the canine
CC interleukin-12 (IL-12) p35 DNA of the invention.

PT Canine cytokine protein which activates canine cytotoxic T lymphocytes -
PT is useful for treatment of viral and autoimmune diseases in dogs.
XX
PS Claim 8; Page 33-34; 51pp; Japanese.
XX
CC This sequence encodes the canine lymphocyte activation factor (CLAF) of
CC the invention. CLAF activates lymphocytes, especially canine cytotoxic T
CC cells. The protein contains a p35 and a p40 subunit. CLAF or antibodies
CC recognising it may be used in the treatment of viral diseases in dogs
CC (such as canine distemper, canine parvovirus and canine infectious
CC hepatitis). The antibodies may also be used in isolation of CLAF from
CC culture of the transformant host cells by affinity chromatography. The
CC p40 homodimer can be used for the treatment of autoimmune diseases in
CC dogs

CC The present invention relates to the feline interleukin (IL)-12p35 or p40
CC subunit protein and their encoding nucleic acid molecules and a nucleic
CC acid linker. The invention also provides the feline caspase (casp)-1,
CC feline IL-18 single chain and canine IL-12 single chain proteins and
CC their nucleic acid molecules. The nucleic acid molecule is useful in
CC preparing a vaccine against infectious diseases in feline animals. The
CC present sequence is the canine single chain IL-12p35 subunit protein
CC encoding cDNA.

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Example 4; SEQ ID NO 61; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the canine single chain IL-12 protein encoding cDNA.

PT   Recombinant feline interleukin-12, useful as immunostimulant and for
PT   treating e.g. viral infections in cats, and related nucleic acid
PT   constructs.
XX
PS   Example 1b; Page 33; 35pp; German.
XX
CC   This invention describes a novel feline interleukin-12 (fIL-12)
CC   polypeptide (I) that is expressed, by recombinant gene expression in
CC   eukaryotic or prokaryotic cells, in the form of both polypeptide chains
CC   of subunits p35 and p40. These proteins are formed so that, in equimolar
CC   concentrations and in presence of an immunizing antigen, they can be
CC   administered to carnivores, particularly domestic cats. The invention
CC   also describes a nucleic acid construct (II) encoding fIL-12 containing
CC   sequences at least 95% identical with the p40- and p35-encoding sequences
CC   (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
CC   as immunostimulants for immunization against infectious diseases and/or
CC   for treating infections or tumors in felines, especially domestic cats.
CC   The products of the invention have immunostimulatory, antiviral and
CC   antitumor activity. Nucleic acid constructs that encode (II) are useful
CC   as adjuvants for prophylactic immunization against viral diseases and for
CC   treating diseases associated with a Th1 defect. IL-12 induces synthesis
CC   of interferon gamma (Th1 response). The feline interleukin-12 polypeptide
CC   is useful for carnivores, and particularly domestic cats in the
CC   following: (i) as immunostimulant, for preventative or therapeutic use;
CC   and (ii) treating tumors and autoimmune diseases, or diseases associated
CC   with a Th1 defect, especially pre-existing infections by feline immune
CC   deficiency virus (FIV), feline leukemia virus and corona virus

PT Identifying an individual who has an altered risk for developing
PT myocardial infarction by detecting a single nucleotide polymorphism in
PT the individual's nucleic acids.
XX
PS Claim 7; SEQ ID NO 3488; 145pp; English.
XX
CC The invention relates to a novel method for identifying an individual who
CC has an altered risk for developing myocardial infarction. The method
CC comprises detecting a single nucleotide polymorphism (SNP) in any one of
CC the nucleotide sequences given in the specification in the individual's
CC nucleic acids, where the presence of the SNP is correlated with an
CC altered risk for myocardial infarction in the individual. The invention
CC further comprises: an isolated nucleic acid molecule comprising at least
CC 8 contiguous nucleotides where one of the nucleotides is an SNP given in
CC the specification or its complement and encoding any one of the amino
CC acid sequences given in the specification; an isolated polypeptide
CC comprising an amino acid sequence given in the specification; an antibody
CC that specifically binds to the polypeptide or its antigen-binding
CC fragment; an amplified polynucleotide containing an SNP given in the
CC specification and which is between about 16 and 1000 nucleotides in
CC length; a kit for detecting an SNP in a nucleic acid, comprising the
CC polynucleotide, a buffer and an enzyme; a method of detecting an SNP in a
CC nucleic acid molecule; a method of detecting a variant polypeptide; and a
CC method for identifying an agent useful in treating or preventing
CC myocardial infarction. The novel detection method has cardiant activity.
CC The nucleic acids of the invention may be used in gene therapy. The
CC method is useful in identifying an individual who has an increased or
CC decreased risk for developing myocardial infarction and for preparing a
CC composition for treating or preventing myocardial infarction. This
CC polynucleotide sequence represents a transcript-based context sequence
CC which flanks an SNP found in a human myocardial infarction-associated
CC gene of the invention. Note: This sequence was not shown in the
CC specification. The sequence has come from an electronic sequence listing
CC downloaded from the WIPO website.

PT Identifying an individual who has an altered risk for developing
PT myocardial infarction by detecting a single nucleotide polymorphism in
PT the individual's nucleic acids.
XX
PS Claim 7; SEQ ID NO 3501; 145pp; English.
XX
CC The invention relates to a novel method for identifying an individual who
CC has an altered risk for developing myocardial infarction. The method
CC comprises detecting a single nucleotide polymorphism (SNP) in any one of
CC the nucleotide sequences given in the specification in the individual's
CC nucleic acids, where the presence of the SNP is correlated with an
CC altered risk for myocardial infarction in the individual. The invention
CC further comprises: an isolated nucleic acid molecule comprising at least
CC 8 contiguous nucleotides where one of the nucleotides is an SNP given in
CC the specification or its complement and encoding any one of the amino
CC acid sequences given in the specification; an isolated polypeptide
CC comprising an amino acid sequence given in the specification; an antibody
CC that specifically binds to the polypeptide or its antigen-binding
CC fragment; an amplified polynucleotide containing an SNP given in the
CC specification and which is between about 16 and 1000 nucleotides in
CC length; a kit for detecting an SNP in a nucleic acid, comprising the
CC polynucleotide, a buffer and an enzyme; a method of detecting an SNP in a
CC nucleic acid molecule; a method of detecting a variant polypeptide; and a
CC method for identifying an agent useful in treating or preventing
CC myocardial infarction. The novel detection method has cardiant activity.
CC The nucleic acids of the invention may be used in gene therapy. The
CC method is useful in identifying an individual who has an increased or
CC decreased risk for developing myocardial infarction and for preparing a
CC composition for treating or preventing myocardial infarction. This
CC polynucleotide sequence represents a transcript-based context sequence
CC which flanks an SNP found in a human myocardial infarction-associated
CC gene of the invention. Note: This sequence was not shown in the
CC specification. The sequence has come from an electronic sequence listing
CC downloaded from the WIPO website.

PT   Novel protein comprising cytotoxic lymphocyte maturation factor in
PT   substantially pure form or protein which exhibits cytotoxic lymphocyte
PT   maturation factor activity, useful as antitumor and immunoenhancing
PT   agent.
XX
PS   Claim 20; Page 29; 74pp; English.
XX
CC   The invention relates to a protein which comprises a cytotoxic lymphocyte
CC   maturation factor (CLMF). The protein is useful for stimulating activated
CC   T-cells which involves treating T-cells with the protein. The method
CC   further involves treating the activated T-cells with IL2 or its
CC   biologically active fragment. The protein is useful for stimulating
CC   natural killer cells which involves treating the natural killer cells
CC   with the protein. The protein has immunoenhancing and antitumour effects
CC   when used as single therapeutic agent in vivo. The present sequence is
CC   used in the exemplification of the present invention.

PS   Disclosure; Page 23-24; 32pp; English.
XX
CC   AAQ97484 and AAQ97485 are from human lymphoblast cell line RMPI 8866. IL-
CC   12 is a heterodimeric cytokine which was originally identified as a
CC   factor which induces gamma-interferon from T cells and natural killer
CC   cells as set forth in PCT/US91/06332, published April 2 1992, and
CC   incorporated by reference. EP 433827, published June 26 1991, disclosed
CC   IL-12 as a cytotoxin lymphocyte maturation factor. In the patent, IL-12
CC   is defined as a heterodimeric glycoprotein comprised of two covalently
CC   linked subunits having mol. wts of about 40 kD and 35 kD. The two
CC   subunits may be disulfide-bonded. IL-12 is administered to prevent or
CC   ameliorate GVHD. Dosage is 1 ng-0.1 mg (esp. 1.0 ng-1 microg)/kg daily
CC   for 3 days, the first dose given 1 hr. after transplant. IL-12 can be
CC   used as the native heterodimer or as subunits. (Updated on 25-MAR-2003 to
CC   correct PN field.)

PT   12 to maintain and/or promote graft-versus-leukaemia effects.
XX
PS   Disclosure; Col 23-24; 20pp; English.
XX
CC   The invention relates to a method for the treatment or prevention of
CC   graft-versus-host disease (GVHD) which comprises the administration of
CC   interleukin-12 (IL-12) at the time of bone-marrow transplantation to
CC   maintain or promote graft-versus-leukaemia effects. Preferably, dosage is
CC   0.001-100 (preferably 1-100) mu g/kg for 3 days starting on the day of
CC   the bone marrow transplant. IL-12 is administered daily until there is an
CC   improvement in the condition. Administration is oral, cutaneous,
CC   subcutaneous, intravenous or by inhalation preferably subcutaneous, or
CC   intravenous. The present sequence encodes the human interleukin-12 35kDa
CC   subunit

CC   The invention relates to nucleic acids encoding modified cytokine
CC   polypeptides (i.e. modified p40 and p35 polypeptides). The modified
CC   cytokine polypeptides have T-cell proliferative and interferon (IFN)-
CC   gamma induction activities. The polypeptides and polynucleotides of the
CC   invention are useful for treating various diseases e.g. bacterial
CC   infections, AIDS, diabetic retinopathy and cancer. The polypeptide and
CC   polynucleotide may also be useful as a vaccine adjuvant, to enhance a
CC   vaccinated host's cell-mediated immunity for protective response to a
CC   pathogen. The present sequence is a modified human p35 protein encoding
CC   DNA

PT   New interleukin 12A (IL-12A) gene polymorphic variants, for studying the
PT   expression and function of IL-12A and screening candidate drugs for
PT   treating AIDS and cancer.
XX
PS   Claim 28; Fig 2; 72pp; English.
XX
CC   The invention comprises the amino acid and coding sequence of the human
```

```
CC   interleukin 12A (IL-12A) protein. Specifically the invention relates to
CC   the identification of polymorphisms within the human (IL-12A) gene
CC   sequence. The polymorphisms identified in the human IL-12A gene sequence
CC   are useful in studying the expression and function of IL-12A, and in
CC   screening drugs for the treatment of disorders such as AIDS, malaria,
CC   tuberculosis and cancer. The IL-12A polymorphisms may be used to
CC   haplotype and genotype the IL-12A gene of an individual. The IL-12A DNA
CC   sequences of the invention can be used to create transgenic animals for
CC   studying expression of the IL-12A isogenes in vivo. The present DNA
CC   sequence represents the coding sequence of the human interleukin 12A (IL-
CC   12A) gene

PT   Human interleukin-12 recombinant insect virus strain and its preparation.
XX
PS   Claim 4; Fig 6; 17pp; Chinese.
XX
CC   The invention relates to a recombinant baculovirus comprising DNA
CC   encoding human interleukin 12 (hIL-12) and methods for its preparation.
CC   The recombinant baculovirus strain is designated Autographa california
CC   nuclear polyhedrosis virus AcNPV-hIL12 (CCTCC No. 2 V200108). This strain
CC   contains two human IL-12 subunit genes, the IL-12 P35 subunit gene
CC   (ACC47589) and the IL-12 P40 subunit gene (ACC47592) which are
CC   respectively under the control of the viral polyhedrin and P10 promoters.
CC   The baculovirus can be used in the recombinant production of human IL-12
CC   which is suitable for treating tumours and bacterial, viral and other
CC   infections. The present sequence represents the human IL-12 P35 subunit
CC   gene used in construction of the baculovirus vector of the invention

PS   Example 27; Fig 34; 232pp; English.
XX
CC   The sequences given in AAQ67879-80 are expression cassettes which contain
CC   the p40 and p35 subunits of human interleukin-12 (IL-12) under the
CC   control of the entomopox virus (EPV) promoter and the vaccinia E3L
CC   promoter, respectively. These sequences were used in the construction of
CC   an ALVAC-based recombinant virus containing the genes for the two
CC   subunits of human IL-12. The p40 subunit was amplified using primers
CC   JP202 and JP189 and placed under the control of the entomopox virus (EPV)
CC   42 kD promoter in plasmid PBSHIL12p40II. The p35 subunit was amplified
CC   using primers JP186 and JP201 and placed under the control of the
CC   vaccinia E3L promoter using primers JP218 and JP220. The expression
CC   cassette was isolated and ligated with pBSSK+ generating plasmid
CC   PBSHIL12p35II. The p35 and p40 expression cassettes were excised and
CC   assembled in pBSSK+ to give PBSHIL12 in which the two expression
CC   cassettes are orientated head-to-head relative to each other. The
CC   combination casette containing the poxvirus promoted genes for both IL-12
CC   subunits was excised from PBSHIL12 and cloned in to ALVAC C6 vector
CC   plasmid pC6L to give pC6HIL12. Recombination between this donor plasmid
CC   and ALVAC rescuing virus produced recombinant virus ALVAC+IL12, which
CC   contains both the human IL-12 genes in the C6 locus. The resulting virus
CC   may be used in a composition for inducing an antigenic or immunological
CC   response, ie. for immunisation against pathogens. (Updated on 25-MAR-2003
CC   to correct PN field.)

PT   Recombinant poxviruses comprising exogenous DNA encoding antigenic
PT   determinants useful in immunotherapy to immunize against cancers and
PT   other diseases such as influenza, Newcastle Disease and rabies.
XX
PS   Example 27; Fig 34; 163pp; English.
XX
CC   The present invention describes a recombinant poxvirus (I), comprising
CC   exogenous DNA encoding an antigenic determinant of a pathogen which is
CC   then expressed in vivo in infected host cells after administration to a
CC   patient and therefore induces an immunological response. (I) may be used
CC   to vaccinate patients against a wide range of diseases and disorders
CC   depending on the type of antigen encoded by the exogenous DNA. (I) may be
CC   used to vaccinate against diseases such as rabies, influenza and
CC   Newcastle Disease. It is particularly useful for immunising against
CC   cancers. The poxvirus (I) also provides a means of manipulating
CC   lymphocytes and tumour cells for use in cell-based immunotherapeutic
CC   modalities for cancer. (I) also have enhanced safety compared to
CC   unattenuated viruses (attenuation reduces the virulence of the viruses)
CC   and known recombinant poxvirus vaccines. This increased level of safety
CC   reduces the possibility of a 'runaway' infection in the host and reduces
CC   the chance of transmission from vaccinated to unvaccinated individuals
CC   and contamination of the environment. The present sequence represents a
CC   Vaccinia E3L/human IL-12 P35 expression cassette used in the
CC   exemplification of the present invention

PT   New recombinant poxvirus which is an attenuated avipox Virus that
PT   expresses an exogenous DNA encoding carcinoembryonic antigen and an
PT   exogenous DNA encoding B7 protein, useful for cancer therapy.
XX
```

```
PS   Example 27; SEQ ID NO 199; 181pp; English.
XX
CC   The invention describes a recombinant poxvirus containing exogenous DNA
CC   in a nonessential region of the poxvirus, where the poxvirus is an
CC   attenuated avipox Virus that expresses an exogenous DNA encoding
CC   carcinoembryonic antigen and an exogenous DNA encoding B7 protein. Also
CC   described are: a composition comprising a poxvirus above in admixture
CC   with a carrier; and expressing carcinoembryonic antigen and B7 protein in
CC   vivo comprising administering to a mammal the composition above.
CC   Disclosed are: making recombinant poxvirus defined above; recombinant
CC   poxvirus vaccine having an increased level of safety compared to known
CC   recombinant poxvirus vaccines; and a modified vector for expressing a
CC   gene product in a host. The recombinant poxvirus is useful for providing
CC   a recombinant poxvirus vaccine having an increased level of safety
CC   compared to known recombinant poxvirus vaccines. The recombinant poxvirus
CC   is useful for cancer therapy. This sequence represents a human IL-12
CC   expression cassette used in the creation of NYVAC rescue virus and
CC   canarypox virus vector ALVAC comprising the human IL-12 gene.

PT   Method for efficiently expressing recombinant human interleukin 12 in
PT   eukaryotic cell.
XX
PS   Claim 6; SEQ ID NO 3; 14pp; Chinese.
XX
CC   The invention describes the process of producing human recombinant
CC   interleukin-12 (IL-12) includes: providing a nucleotide sequence
CC   corresponding to the P35 subunit with the first signal peptide and a
CC   nucleotide sequence corresponding to the P40 subunit; inserting the
CC   nucleotide sequences into an expression vector; converting the eukaryotic
CC   cell with the expression vector; and culturing the transfected eukaryotic
CC   cell in condition suitable for recombinant human IL-12 expression. The
CC   process balances the expression amount of both P35 and P40 subunits and
CC   thus raises the expression amount of IL-12 with bioactivity via raising
CC   the expression strength of P35 subunit. This sequence represents the
CC   human interleukin-12 (IL-12) P35 subunit polynucleotide.

PT   Use of immunodeficient mice comprising human cells - particularly
PT   SCTD/beige mice comprising human immune cells for evaluating vaccines
PT   against cancers or human pathogens, e.g. HIV.
XX
PS   Example 10(c)(i); Page 108-109; 154pp; English.
XX
CC   Immunodeficient mice comprising human cells can be used for exposure to
CC   human pathogens and/or their components or human tumour cells and human
CC   peripheral blood lymphocytes. Also claimed is a vaccine comprising a cell
CC   modified to express an antigen and an immune-modulating protein, this is
CC   preferably an expression vector comprising a polynucleotide sequence that
CC   encodes the antigen and immune-modulating protein. Such vectors can be
CC   used to treat a subject having a tumour by transferring the expression
CC   vector into the tumour so that the antigen and the immune-modulator are
CC   expressed by at least the tumour. The methods can be used for producing
CC   and evaluating vaccines including cancer vaccines and vaccines directed
CC   against human pathogens, e.g. HIV, Leishmania, Mycobacterium, Listeria or
CC   Plasmodium. Two primers (AAV83197, AAV83198) were used to amplify the IL-
CC   12B for insertion into expression vectors of the invention

PT   New antisense oligonucleotides useful for treating e.g. pulmonary
PT   vasoconstruction, inflammation, allergies, asthma, hypertension,
PT   bronchitis, emphysema, respiratory distress syndrome, ischemia or
PT   cancers.
XX
PS   Disclosure; Page 1242; 1343pp; English.
XX
CC   The present invention describes a new composition comprising an antisense
CC   oligonucleotide (ON) with low adenosine (up to 15%), which targets
CC   nucleic acids involved in bronchoconstriction, allergies, and/or
CC   inflammation. The ON can have antiinflammatory, antiallergic,
CC   antiasthmatic, cytostatic and analgesic activities. The compositions are
CC   useful for the treatment of diseases associated with inflammation,
CC   impaired airways, including lung disease and diseases whose secondary
CC   effects afflict the lungs of a subject. They can be used for treating
CC   e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma,
CC   impeded respiration, respiratory distress syndrome, pain, cystic
CC   fibrosis, pulmonary hypertension, emphysema, chronic obstructive
CC   pulmonary disease (COPD), and cancers such as leukaemias, lymphomas,
CC   carcinomas, and cancers which may metastasise to the lungs, including
CC   breast and prostate cancer. The reduction of the adenosine content of the
CC   ONs reduces side effects. The A-containing ONs break down with the
CC   release of deoxyadenosine which activates adenosine receptors causing
CC   bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the
CC   nucleotide sequences given in the sequence listing from the present
CC   invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185
CC   sequences are also called SEQ ID NO:1 to 185, but the sequences differ
CC   from the previously named sequences. SEQ ID NO:11 to 1680 (AAA32323 to
CC   AAA33992) are specifically claimed ONs from the present invention. N.B.
CC   Sequences given in the disclosure of the present invention do not match
CC   up with their corresponding SEQ ID NO: sequences given in the sequence
CC   listing

PT   Low adenosine (A) content antisense oligonucleotides which do not trigger
PT   adenosine receptors during metabolism, useful e.g. for treating cancers
PT   and respiratory obstructions.
XX
PS   Disclosure; Page 1326; 1592pp; English.
XX
CC   The present invention describes low adenosine (A) content antisense
CC   oligonucleotides and compositions (I) comprising them. In the antisense
CC   oligonucleotides the A is replaced by a 'Universal' or alternative base.
CC   (I) can have respiratory, bronchodilator, antiinflammatory, analgesic,
CC   immunosuppressive, antiasthmatic, hypotensive and cytostatic activities.
CC   The antisense oligonucleotides and (I) can be used to down-regulate the
CC   expression and or activity of target polypeptides associated with
CC   lung/respiratory disorders and malignancies, such as stimulating and
CC   activating peptide factors and transmitters, transcription factors,
CC   immunoglobulins and antibodies, antibody receptors, cytokines and
CC   chemokines, endogenously produced specific and non-specific enzymes,
CC   binding proteins, adhesion molecules and their receptors, cytokine and
CC   chemokine receptors, adenosine receptors, bradykinin receptors, central
CC   nervous system (CNS) and peripheral nervous and non-nervous system
CC   receptors, CNS and peripheral nervous and non-nervous system peptide
CC   transmitters, defensins, growth factors, vasoactive peptides and
CC   receptors, binding proteins and malignancy associated proteins. The
CC   antisense oligonucleotides may be used in this way to treat disorders
CC   including respiratory obstruction (especially pulmonary obstruction
CC   and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or
CC   surfactant hypoproduction which are associated with a disease or
CC   condition selected from pulmonary vasoconstriction, inflammation,
CC   allergies, asthma, impeded respiration, respiratory distress syndrome
CC   (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary
CC   hypertension, emphysema, chronic obstructive pulmonary disease (COPD),
CC   pulmonary transplantation rejection, pulmonary infections, bronchitis,
CC   and/or cancer. AAF18434 to AAF21543 represent human polynucleotide
CC   fragments and antisense oligonucleotides used in the exemplification of
CC   the present invention

PT   Pharmaceutical composition for treating ailments associated with impaired
PT   respiration, has oligo(s) antisense to specific gene(s) or its
PT   corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
PT   ubiquinone.
XX
PS   Disclosure; SEQ ID NO 12259; 872pp; English.
XX
CC   The invention relates to a novel pharmaceutical composition, which has a
CC   first active agent comprising an oligonucleotide antisense to the
CC   initiation codon, coding region, 5' or 3' end genomic flanking regions,
```

```
CC   5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
CC   junctions of genes encoding a polypeptide associated with lung and/or
CC   nasal airway dysfunction and a second active agent comprising an
CC   antiinflammatory steroid and ubiquinone. A composition of the invention
CC   has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
CC   immunosuppressive, and cytostatic activity. The composition may have a
CC   use in antisense gene therapy. The composition is useful for treating or
CC   preventing a respiratory, lung or malignant disease or condition, also
CC   for enhancing the prophylactic or therapeutic respiratory effect of an
CC   antiinflammatory steroid in a subject, for reducing or depleting levels
CC   of, or reducing sensitivity to adenosine, reducing levels of adenosine
CC   receptor, producing bronchodilation, increasing levels of ubiquinone or
CC   lung surfactant in a subject's tissue, or treating bronchoconstriction,
CC   lung inflammation, lung allergies, or a respiratory disease or condition.
CC   Note: The sequence data for this patent is not represented in the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

PT   Pharmaceutical composition for treating asthma, has antisense
PT   oligonucleotide containing less percentage of adenosine, targeted to
PT   nucleic acids associated with lung airway or lung dysfunction, and
PT   bronchodilating agent.
XX
PS   Claim 15; SEQ ID NO 12259; 763pp; English.
XX
CC   This invention describes a novel composition (a) a first active agent,
CC   comprising oligonucleotides, effective for alleviating
CC   bronchoconstriction, respiratory tract inflammation, allergies and
CC   reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC   surfactant depletion or hyposecretion, when administered to a mammal. The
CC   oligonucleotides are derived from a gene encoding or regulating
CC   expression of a target polypeptide associated with lung airway or lung
CC   dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC   The invention also describes a kit, that comprises: (a) a delivery
CC   device, in separate containers, (b) the oligonucleotides, (c)
CC   instructions for adding a carrier and for use of the kit. The composition
CC   of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC   analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC   beta-adrenergic agonist. The composition is useful for preventing or
CC   treating a respiratory, lung or malignant disease. The administered
CC   composition comprises oligo and is administered to reduce the production
CC   or availability, or to increase the degradation of the target mRNA or to
CC   reduce the amount of target polypeptide present in the lungs. The
CC   pulmonary obstruction, and/or bronchoconstriction and/or lung
CC   inflammation, allergies and/or surfactant hypoproduction are associated
CC   with a disease or condition such as pulmonary vasoconstriction,
CC   inflammation, allergies, asthma, impeded respiration, respiratory
CC   distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC   hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
CC   transplantation rejection, pulmonary infections, bronchitis or cancer.
CC   The reduced adenosine content of the anti-sense oligos corresponding to
CC   thymidines present in the target RNA serves to prevent the breakdown of
CC   the oligonucleotides into products that free adenosine into the system
CC   e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
CC   prevent any unwanted effects due to it

PT Viral vector that expresses single-chain interleukin-12 and costimulator,
PT useful for treatment of tumors, viral infections, e.g. human
PT immunodeficiency virus, and prion diseases.
XX
PS Claim 4; Fig 20; 129pp; German.
XX
CC The present invention relates to a viral vector that includes a nucleic
CC acid encoding a single-chain interleukin-12 (IL-12) and a co-stimulatory
CC protein. Viral vectors and virus particles derived from them are useful
CC for treatment of tumours, infectious diseases (e.g. HIV, hepatitis A, B
CC or C, cytomegalovirus or human papilloma virus), or prion diseases. The
CC present sequence is a human interleukin-12 coding sequence used in the
CC exemplification of the invention.

PT Inhibiting or treating a tumor, metastasis or infectious lesion comprises
PT administering into or near site of a tumor or infectious lesion an
PT antigen presenting cell and an immunostimulatory cytokine or a nucleic
PT acid encoding the cytokine.
XX
PS Disclosure; SEQ ID NO 57; 169pp; English.
XX
CC This invention relates to a novel method of inhibiting or treating a
CC tumour, metastasis or infectious lesion in a subject which comprises
CC administering into or near a site of a tumour or infectious lesion in a
CC subject an antigen presenting cell and an immunostimulatory cytokine or a
CC nucleic acid encoding the cytokine. The invention may be useful for the
CC production of compounds with a cytostatic or vulnerary activity acting as
CC immunomodulators. The method is useful in inhibiting or treating a
CC tumour, metastasis or infectious lesion in a subject, where the size of
CC the tumour, metastasis (where number is also decreased) or infectious
CC lesion is decreased. The tumour is selected from melanoma, hepatoma,
CC adenocarcinoma, colorectal cancer, basal cell cancer, oral cancer,
CC nasopharyngeal cancer, laryngeal cancer, bladder cancer, head and neck
CC cancer, renal cell cancer, pancreatic cancer, pulmonary cancer, cervical
CC cancer, ovarian cancer, oesophageal cancer, gastric cancer, prostrate
CC cancer, testicular cancer and breast cancer. The present sequence is that
CC of a gene which is related to the invention.

            Clones are derived from the INRA bovine BAC library
            (http://locus.jouy.inra.fr/fpc/cattle_bac_map.htm). For BAC library
            availability, please contact Andre Eggen (eggen@jouy.inra.fr). This
            work  was undertaken as part of the International Bovine BAC
            Mapping Consortium (IBBMC) by INRA (Jouy-en-Josas) and Genoscope
            (Evry) Plate: 238 row: E column: 06
            Seq primer: M13 Reverse
            Class: BAC ends.

                     /lab_host="DH10B (Life Technologies)"
                     /clone_lib="UI-R-C0"
                     /note="Vector: pT7T3D-PacI; Site_1: Not I; Site_2: Eco RI;
                     The UI-R-C0 library is a subtracted library derived from
                     the UI-R-A1 and UI-R-E1 libraries. The UI-R-A1 library
                     consisted of a mixture of individually tagged normalized
                     libraries constructed from rat  placenta, adult lung,
                     brain, liver, kidney, heart, spleen, ovary,  and muscle.
                     The UI-R-E1 library  consisted of a mixture of
                     individually tagged normalized libraries constructed from
                     8, 12 and 18-day embryo. The tag is a string of 3-5
                     nucleotides present between the Not I  site and the
                     oligo-dT track which allows identification of the library
                     of origin of a clone within the mixture. The subtracted
                     library (UI-R-C0) was constructed as follows: PCR
                     amplified cDNA inserts from a pool of UI-R-A1 and UI-R-E1
                     clones from which 3' ESTs had been derived was used as a
                     driver in a hybridization with the pooled UI-R-A1 and
                     UI-R-E1 library in the form of single-stranded circles.
                     The remaining single-stranded circles (subtracted library)
                     was purified by hydroxyapatite column chromatography,
                     converted to double-stranded circles and electroporated
                     into DH10B bacteria (Life Technologies) to generate the
                     UI-R-C0 library. This procedure has been previously
                     described (Bonaldo, Lennon and Soares, Genome Research 6:
                     791-806, 1996)"

                     /note="Vector: pBRcDNASfiAB; The library was constructed
                     from 10 different sources of RNA from a single genotype.
                     Separate cDNAs were generated using primers that
                     incorporated unique 5' and 3' tags to distinguish each
                     source of RNA. cDNAs were then pooled, size-fractionated,
                     directionally cloned into a custom medium-copy vector and
                     transformations made with four size classes to minimize
                     size bias. Details of each source of RNA and library
                     construction can be obtained at http://cgpdb.ucdavis.edu/

                     /clone_lib="Mouse 10kb plasmid UUGC1M library"
                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
                     adaptored DNA was purified and size-selected for a 9.5 to
                     10.5 kb range using preparative agarose gel
                     electrophoresis. Vector DNA was prepared from a derivative
                     of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                     inducible derivative of plasmid R1. The vector was ligated
                     with adaptors complementary to the insert adaptors and
                     purified. The sheared, adaptored mouse DNA was annealed to
                     adaptored vector DNA, and transformed into
                     chemically-competent E. coli XL10-Gold (Stratagene) cells
                     and selected for ampicillin resistance."

            This clone is from an A. gambiae BAC library (ND-TAM) provided by
            F.H. Collins and sequenced by The Institute for Genomic Research
            (TIGR). The BAC library was generated from A. gambiae PEST strain
            DNA. All DNA was extracted from newly hatched first instar larvae
            to minimize the inclusion of DNA from microorganisms that inhabit
            the gut. The DNA is derived from mixed sexes of larvae. The BAC
            library was constructed at Texas A&M Universty BAC Center
            University, College Station, Texas 77843-2123, USA using a HindIII
            partial digest.
            Seq primer: M13 Rev
            Class: BAC ends.

                     HindIII; Rice is one of two most popular grains in the
                     world. Half of the world  population especially those
                     inhabiting highly populated areas of the  humid tropics
                     and subtropics, rely on rice as their primary source of
                     carbohydrate. Monocotyledonous rice is a diploid plant
                     (2n=24) with a  haploid genome equivalent of 431 Mbp
                     (Arumuganathan and Earle, 1991).  The relatively small
                     genome of rice, three times larger than that of
                     Arabidopsis, makes it suitable for genomic studies. In
                     order to  facilitate positional cloning, physical mapping
                     and genome sequencing  of rice, we have constructed a BAC
                     library from Oryza sativa, Nipponbare  variety. The
                     library contains 36,864 clones with an average insert size
                     of 128.5 Kb providing 10.9 haploid genome equivalents. The
                     deep  coverage allows the isolation a particular sequence
                     with a probability  of 99.9 %. Two high density filters,
                     each containing 18,432 clones  (doubly spotted), represent
                     the whole library for colony screening."

                     /note="Vector: pExpress1; Site_1: SmaI; Site_2: NotI; The
                     library was constructed by reverse transcription of 1 ug
                     mRNA using the oligo dT primer GCGGCCGCCC(T)20 and an
                     RNaseH + MMLV reverse transcriptase. Second strand
                     synthesis was carried out by standard methods. The cDNA
                     was size selected by agarose gel for > 1.2 kb, digested
                     with Not I and directionally cloned into the vector
                     Express-1 at the SmaI/NotI sites. DNA from the primary
                     library was used for in vitro transcription from the T7
                     promoter to produce biotinylated RNA transcripts. These
                     biotinylated transcripts, along with blocking oligos to
                     the poly-A, multiple cloning site and primer regions, were
                     hybridized with single stranded circles produced by
                     phagmeid production from the primary library to a Cot
                     value of 10-20. Strepavidin/phenol extraction was utilized
                     to remove DNA:RNA hybrids leaving un-hybridized single
                     stranded circles which were repaired by primer extension
                     and transformed back into E. coli resulting in the
                     normalized library. Average insert size 2.0 kb. 3'
                     linker/adaptor sequence GCGGCCGCCC(T)20. This libary was
                     constructed by Agencourt Bioscience."

```

```
                     /note="Vector: Express 1; Total and poly A+ RNA was
                     isolated from the indicated stickleback tissue, and a cDNA
                     library was constructed in the Express 1 plasmid vector by
                     Open Biosystems. First strand cDNA synthesis was primed
                     with an 54 bp linker primer containing an oligodT sequence
                     preceeded by a synthetic NotI site (first strand primer:
                     5'-GACTAGTTCTAGATCGCGAGCGGCCGCCC(T)25-3'). Following
                     second strand synthesis, cDNAs were made blunt at the end
                     corresponding to the original 5 prime end of mRNA, and
                     cloned directionally into the NotI and EcoRV sites of
                     Express 1. Note that the EcoRV site is typically destroyed
                     in the blunt end cloning, leaving a junction of the form
                     'xxxATC' (where is ATC is the second half of the EcoRV
                     site, and xxx is derived from the cDNA sequence). A map of
                     the Express 1 vector is available at:
                     http://www.openbiosystems.com/cdna_library_construction_fa
                     q.php#8 The primary library was transformed and amplified
                     in DH10B (T1 phage resistant) bacteria. Clones available
                     from Open Biosystems:
                     http://www.openbiosystems.com/stickleback"

                     /clone="UUGC1M0176H05"
                     /sex="Male"
                     /lab_host="E. Coli strain XL10-Gold, T1-resistant, F-"
                     /clone_lib="Mouse 10kb plasmid UUGC1M library"
                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
                     adaptored DNA was purified and size-selected for a 9.5 to
                     10.5 kb range using preparative agarose gel
                     electrophoresis. Vector DNA was prepared from a derivative
                     of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                     inducible derivative of plasmid R1. The vector was ligated
                     with adaptors complementary to the insert adaptors and
                     purified. The sheared, adaptored mouse DNA was annealed to
                     adaptored vector DNA, and transformed into
                     chemically-competent E. coli XL10-Gold (Stratagene) cells
                     and selected for ampicillin resistance."

            This sequence is from a Xenopus Gene Collection (XGC) library
            constructed by Aaron M. Zorn.
            cDNA was oligo dT primed from 5ug of poly A+ RNA from egg.
            EcoRI-NotI cut cDNA was then ligated into pCS107 with EcoRI at the
            5' end and NotI at the 3' end.
            Vector: pCS107; Site_1: EcoRI; Site_2: NotI
            Host: Escherichia coli XL1-blue.

            DNA Sequencing: DOE Joint Genome Institute: http://www.jgi.doe.gov
            Clone Unavailable: The master plate for this cDNA clone no longer
            exists.
            Naming Conventions: EST name is generated by the concatenation of
            the JGI Clone Id and the direction of sequencing. The suffix '.rev'
            indicates a reverse sequencing read of the insert. It does not
            necessarily reflect the orientation of the insert.
            Poly-A: Based upon the presence of a run of 14 or more T residues
            at the beginning of the sequence, this clone was polyadenylated.
            The resulting Poly-T sequence has been removed.
            Small Insert: Based upon one or more sequencing reads of this clone
            where vector sequence was present at both ends, this clone has been
            determined to contain a cDNA insert on the order of 600-1000 bases.

            TROPICALIS_SEQUENCE_ID: TTpA002b09.q1kT7
            Sequencing primer: T7
            This sequence is from a Xenopus Gene Collection (XGC) library
            constructed by Nigel Garrett.
            cDNA was oligo dT primed from 5ug of poly A+ RNA from tadpole
            embryos. EcoRI-NotI cut cDNA was then ligated into pCS107 with
            EcoRI at the 5' end and NotI at the 3' end.
            Vector: pCS107; Site_1: EcoRI; Site_2: NotI
            Host: Escherichia coli DH10B.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX
CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC proteins. A composition comprising a feline IL-18, feline caspase-1,
CC feline IL-12 single chain or canine IL-12 single chain proteins, a
CC nucleic acid encoding these proteins, mimetopes of these proteins,
CC multimeric forms of these proteins, an antibody against these proteins,
CC or an inhibitor identified by its ability to inhibit the activity of
CC these proteins, can be used to treat or prevent autoimmune diseases,
CC allergic reactions, infectious diseases, tumour development, inflammatory
CC diseases and/or graft rejection in animals. The present nucleic acid
CC sequence represents a feline interleukin 12 DNA sequence, as described in
CC the invention

PT New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT p40 subunit protein and a nucleic acid linker, useful in preparing a
PT vaccine against infectious diseases in feline animals.
XX
PS Example 3; SEQ ID NO 45; 103pp; English.
XX
CC The present invention relates to the feline interleukin (IL)-12p35 or p40
CC subunit protein and their encoding nucleic acid molecules and a nucleic
CC acid linker. The invention also provides the feline caspase (casp)-1,
CC feline IL-18 single chain and canine IL-12 single chain proteins and
CC their nucleic acid molecules. The nucleic acid molecule is useful in
CC preparing a vaccine against infectious diseases in feline animals. The
CC present sequence is the feline single chain IL-12 complementary DNA.

XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Claim 24; SEQ ID NO 38; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
```

```
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain IL-12 protein encoding cDNA.

XX
CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC proteins. A composition comprising a feline IL-18, feline caspase-1,
CC feline IL-12 single chain or canine IL-12 single chain proteins, a
CC nucleic acid encoding these proteins, mimetopes of these proteins,
CC multimeric forms of these proteins, an antibody against these proteins,
CC or an inhibitor identified by its ability to inhibit the activity of
CC these proteins, can be used to treat or prevent autoimmune diseases,
CC allergic reactions, infectious diseases, tumour development, inflammatory
CC diseases and/or graft rejection in animals. The present nucleic acid
CC sequence represents a canine interleukin 12 DNA sequence, as described in
CC the invention

XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a canine interleukin 12 DNA sequence, as described in
CC   the invention

PT New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT p40 subunit protein and a nucleic acid linker, useful in preparing a
PT vaccine against infectious diseases in feline animals.
XX
PS Example 4; SEQ ID NO 68; 103pp; English.
XX
CC The present invention relates to the feline interleukin (IL)-12p35 or p40
CC subunit protein and their encoding nucleic acid molecules and a nucleic
CC acid linker. The invention also provides the feline caspase (casp)-1,
CC feline IL-18 single chain and canine IL-12 single chain proteins and
CC their nucleic acid molecules. The nucleic acid molecule is useful in
CC preparing a vaccine against infectious diseases in feline animals. The
CC present sequence is the canine single chain IL-12 complementary DNA.

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Example 4; SEQ ID NO 66; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the canine single chain IL-12 protein encoding cDNA.

XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a canine interleukin 12 DNA sequence, as described in
CC   the invention

PS Claim 6; Page 82-83; 106pp; English.
XX
CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC proteins. A composition comprising a feline IL-18, feline caspase-1,
CC feline IL-12 single chain or canine IL-12 single chain proteins, a
CC nucleic acid encoding these proteins, mimetopes of these proteins,
CC multimeric forms of these proteins, an antibody against these proteins,
CC or an inhibitor identified by its ability to inhibit the activity of
CC these proteins, can be used to treat or prevent autoimmune diseases,
CC allergic reactions, infectious diseases, tumour development, inflammatory
CC diseases and/or graft rejection in animals. The present nucleic acid
CC sequence represents a canine interleukin 12 DNA sequence, as described in
CC the invention

PS   Example 4; SEQ ID NO 63; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the canine single chain IL-12 complementary DNA.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

TITLE Direct Submission

JOURNAL Submitted (30-MAR-2004) Yoshihide Hayashizaki, The Institute of Physical and Chemical Research (RIKEN), Laboratory for Genome Exploration Research Group, RIKEN Genomic Sciences Center (GSC), RIKEN Yokohama Institute; 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama, Kanagawa, 230-0045, Japan (E-mail:genome-res@gsc.riken.jp, URL:http://genome.gsc.riken.jp/, Tel:81-45-503-9222, Fax:81-45-503-9216)

COMMENT cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
Tissues were provided by Dr. John Todd (Dept. of Medical Genetics Wellcome Trust Centre for Molecular Mechanisms in Disease Wellcome Trust/MRC building Addenbrookes Hospital Cambridge) whose assistance we gratefully acknowledge.
Please visit our web site for further details.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain

```
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

PT New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT p40 subunit protein and a nucleic acid linker, useful in preparing a
PT vaccine against infectious diseases in feline animals.
XX
PS Claim 23; SEQ ID NO 35; 103pp; English.
XX
CC The present invention relates to the feline interleukin (IL)-12p35 or p40
CC subunit protein and their encoding nucleic acid molecules and a nucleic
CC acid linker. The invention also provides the feline caspase (casp)-1,
CC feline IL-18 single chain and canine IL-12 single chain proteins and
CC their nucleic acid molecules. The nucleic acid molecule is useful in
CC preparing a vaccine against infectious diseases in feline animals. The
CC present sequence is the feline single chain mature IL-12p35 subunit
CC protein encoding cDNA.

PT New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT p40 subunit protein and a nucleic acid linker, useful in preparing a
PT vaccine against infectious diseases in feline animals.
XX

PS Example 3; SEQ ID NO 37; 103pp; English.
XX
CC The present invention relates to the feline interleukin (IL)-12p35 or p40
CC subunit protein and their encoding nucleic acid molecules and a nucleic
CC acid linker. The invention also provides the feline caspase (casp)-1,
CC feline IL-18 single chain and canine IL-12 single chain proteins and
CC their nucleic acid molecules. The nucleic acid molecule is useful in
CC preparing a vaccine against infectious diseases in feline animals. The
CC present sequence is the feline single chain mature IL-12p35 subunit
CC complementary DNA.

CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC proteins. A composition comprising a feline IL-18, feline caspase-1,
CC feline IL-12 single chain or canine IL-12 single chain proteins, a
CC nucleic acid encoding these proteins, mimetopes of these proteins,
CC multimeric forms of these proteins, an antibody against these proteins,
CC or an inhibitor identified by its ability to inhibit the activity of
CC these proteins, can be used to treat or prevent autoimmune diseases,
CC allergic reactions, infectious diseases, tumour development, inflammatory
CC diseases and/or graft rejection in animals. The present nucleic acid
CC sequence represents a feline interleukin 12 DNA sequence, as described in
CC the invention

XX
PT New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT p40 subunit protein and a nucleic acid linker, useful in preparing a
PT vaccine against infectious diseases in feline animals.
XX
PS Example 3; SEQ ID NO 34; 103pp; English.
XX
CC The present invention relates to the feline interleukin (IL)-12p35 or p40
CC subunit protein and their encoding nucleic acid molecules and a nucleic
CC acid linker. The invention also provides the feline caspase (casp)-1,
CC feline IL-18 single chain and canine IL-12 single chain proteins and
CC their nucleic acid molecules. The nucleic acid molecule is useful in
CC preparing a vaccine against infectious diseases in feline animals. The
CC present sequence is the feline single chain IL-12p35 subunit full-length
CC complementary DNA.

PT   Recombinant feline interleukin-12, useful as immunostimulant and for
PT   treating e.g. viral infections in cats, and related nucleic acid
PT   constructs.
XX
PS   Disclosure; Fig 2; 35pp; German.
XX
CC   This invention describes a novel feline interleukin-12 (fIL-12)
CC   polypeptide (I) that is expressed, by recombinant gene expression in
CC   eukaryotic or prokaryotic cells, in the form of both polypeptide chains
CC   of subunits p35 and p40. These proteins are formed so that, in equimolar
CC   concentrations and in presence of an immunizing antigen, they can be
CC   administered to carnivores, particularly domestic cats. The invention
CC   also describes a nucleic acid construct (II) encoding fIL-12 containing
CC   sequences at least 95% identical with the p40- and p35-encoding sequences
CC   (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
CC   as immunostimulants for immunization against infectious diseases and/or
CC   for treating infections or tumors in felines, especially domestic cats.
CC   The products of the invention have immunostimulatory, antiviral and
CC   antitumor activity. Nucleic acid constructs that encode (II) are useful
CC   as adjuvants for prophylactic immunization against viral diseases and for
CC   treating diseases associated with a Th1 defect. IL-12 induces synthesis
CC   of interferon gamma (Th1 response). The feline interleukin-12 polypeptide
CC   is useful for carnivores, and particularly domestic cats in the
CC   following: (i) as immunostimulant, for preventative or therapeutic use;
CC   and (ii) treating tumors and autoimmune diseases, or diseases associated
CC   with a Th1 defect, especially pre-existing infections by feline immune
CC   deficiency virus (FIV), feline leukemia virus and corona virus

PT Vaccine for treating or preventing lentivirus infection in cats, contains
PT nucleic acid sequence encoding viral protein under control of eukaryotic
PT promoter.
XX
PS Claim 14; Page 37; 37pp; German.
XX
CC This invention describes a novel vaccine (A) for prevention or treatment
CC of lentivirus infection in felines which comprises an immunizing nucleic
CC acid sequence (I) that contains, or comprises, at least part of a gene
CC encoding a protein (II) of the virus, under control of a eukaryotic
CC promoter functional in the relevant animal. (II) is especially the
CC envelope (env) protein. The invention also describes (1) vaccine (A)
CC containing an immunizing protein, or fragment, from a lentivirus plus at
CC least one of interleukin (IL)-12 and/or -16; and (2) preparation of a
CC lentivirus protein, or fragment, especially derived from feline immune
CC deficiency virus (FIV), by expressing the corresponding nucleic acid
CC sequence in a host cell. The products of the invention have antiviral
CC activity. The vaccine (A) and related protein-based vaccines, are
CC particularly used to treat or prevent lentivirus infections in domestic
CC cats, especially feline immune deficiency virus (FIV). Vaccination with
CC (A) allows differentiation between vaccinated and infected animals, from
CC the antibody status. The vaccines may be formulated with an adjuvant
CC (particularly interleukin-12 and/or IL-16) that elicits a cytotoxic
CC immune response, particularly a Th1 response

XX
PT   Recombinant feline interleukin-12, useful as immunostimulant and for
PT   treating e.g. viral infections in cats, and related nucleic acid
PT   constructs.
XX
PS   Claim 3; Page 31; 35pp; German.
XX
CC   This invention describes a novel feline interleukin-12 (fIL-12)
CC   polypeptide (I) that is expressed, by recombinant gene expression in
CC   eukaryotic or prokaryotic cells, in the form of both polypeptide chains
CC   of subunits p35 and p40. These proteins are formed so that, in equimolar
CC   concentrations and in presence of an immunizing antigen, they can be
CC   administered to carnivores, particularly domestic cats. The invention
CC   also describes a nucleic acid construct (II) encoding fIL-12 containing
CC   sequences at least 95% identical with the p40- and p35-encoding sequences
CC   (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
CC   as immunostimulants for immunization against infectious diseases and/or
CC   for treating infections or tumors in felines, especially domestic cats.
CC   The products of the invention have immunostimulatory, antiviral and
CC   antitumor activity. Nucleic acid constructs that encode (II) are useful
CC   as adjuvants for prophylactic immunization against viral diseases and for
CC   treating diseases associated with a Th1 defect. IL-12 induces synthesis
CC   of interferon gamma (Th1 response). The feline interleukin-12 polypeptide
CC   is useful for carnivores, and particularly domestic cats in the
CC   following: (i) as immunostimulant, for preventative or therapeutic use;
CC   and (ii) treating tumors and autoimmune diseases, or diseases associated
CC   with a Th1 defect, especially pre-existing infections by feline immune
CC   deficiency virus (FIV), feline leukemia virus and corona virus

PT   Novel feline cytokine protein - useful for treating feline auto:immune
PT   diseases, e.g. those caused by feline herpes virus or feline calcivirus.
XX
PS   Claim 24; Page 67; 94pp; Japanese.
XX
CC   This sequence encodes a fragment of a novel feline cytokine protein,
CC   FLAFp35. This protein can be used in the production of a FLAFp35/FLAFp40
CC   heterodimer which can potentiate the cytotoxic activity of feline
CC   cytotoxic T lymphocyte cells. Such proteins are used for treatment of
CC   feline autoimmune diseases e.g. as caused by feline herpes virus or
CC   feline calcivirus

PT   Vaccine for treating or preventing lentivirus infection in cats, contains
PT   nucleic acid sequence encoding viral protein under control of eukaryotic
PT   promoter.
XX
PS   Disclosure; Page 31-33; 37pp; German.
XX
CC   This invention describes a novel vaccine (A) for prevention or treatment
CC   of lentivirus infection in felines which comprises an immunizing nucleic
CC   acid sequence (I) that contains, or comprises, at least part of a gene
CC   encoding a protein (II) of the virus, under control of a eukaryotic
CC   promoter functional in the relevant animal. (II) is especially the
CC   envelope (env) protein. The invention also describes (1) vaccine (A)
CC   containing an immunizing protein, or fragment, from a lentivirus plus at
CC   least one of interleukin (IL)-12 and/or -16; and (2) preparation of a
CC   lentivirus protein, or fragment, especially derived from feline immune
CC   deficiency virus (FIV), by expressing the corresponding nucleic acid
CC   sequence in a host cell. The products of the invention have antiviral
CC   activity. The vaccine (A) and related protein-based vaccines, are
CC   particularly used to treat or prevent lentivirus infections in domestic
CC   cats, especially feline immune deficiency virus (FIV). Vaccination with
CC   (A) allows differentiation between vaccinated and infected animals, from
CC   the antibody status. The vaccines may be formulated with an adjuvant
CC   (particularly interleukin-12 and/or IL-16) that elicits a cytotoxic
CC   immune response, particularly a Th1 response

                     /dev_stage="adult"
                     /lab_host="DH10B (Life Technologies)"
                     /clone_lib="UI-R-C0"
                     /note="Vector: pT7T3D-PacI; Site_1: Not I; Site_2: Eco RI;
                     The UI-R-C0 library is a subtracted library derived from
                     the UI-R-A1 and UI-R-E1 libraries. The UI-R-A1 library
                     consisted of a mixture of individually tagged normalized
                     libraries constructed from rat  placenta, adult lung,
                     brain, liver, kidney, heart, spleen, ovary,  and muscle.
                     The UI-R-E1 library  consisted of a mixture of
                     individually tagged normalized libraries constructed from
                     8, 12 and 18-day embryo. The tag is a string of 3-5
                     nucleotides present between the Not I  site and the
                     oligo-dT track which allows identification of the library
                     of origin of a clone within the mixture. The subtracted
                     library (UI-R-C0) was constructed as follows: PCR
                     amplified cDNA inserts from a pool of UI-R-A1 and UI-R-E1
                     clones from which 3' ESTs had been derived was used as a
                     driver in a hybridization with the pooled UI-R-A1 and
                     UI-R-E1 library in the form of single-stranded circles.
                     The remaining single-stranded circles (subtracted library)
                     was purified by hydroxyapatite column chromatography,
                     converted to double-stranded circles and electroporated
                     into DH10B bacteria (Life Technologies) to generate the
                     UI-R-C0 library. This procedure has been previously
                     described (Bonaldo, Lennon and Soares, Genome Research 6:
                     791-806, 1996)"

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
